Introduction to AMT **4**

Training Workshops **5**

1. Add Documents to the Library 5
2. Link Library Documents to Strategy Tasks 7
3. Search for Library Documents 12
4. Library Jobs 13

Preface

The training workshops are developed to supplement instructor-led training. This guide is constructed in a way that teaches students the key functionality of the application through practical, hands-on workshops. Each workshop details tasks that the student is required to complete. The workshops build on each other to help ensure a comprehensive understanding of the application is achieved at the completion of the course. Space is provided at the end of each workshop for learning checks and student notes.

Symbol Library

Note

A note for participants about the task.

Important Reminder

An important reminder for the participant about the task.

Learning Check

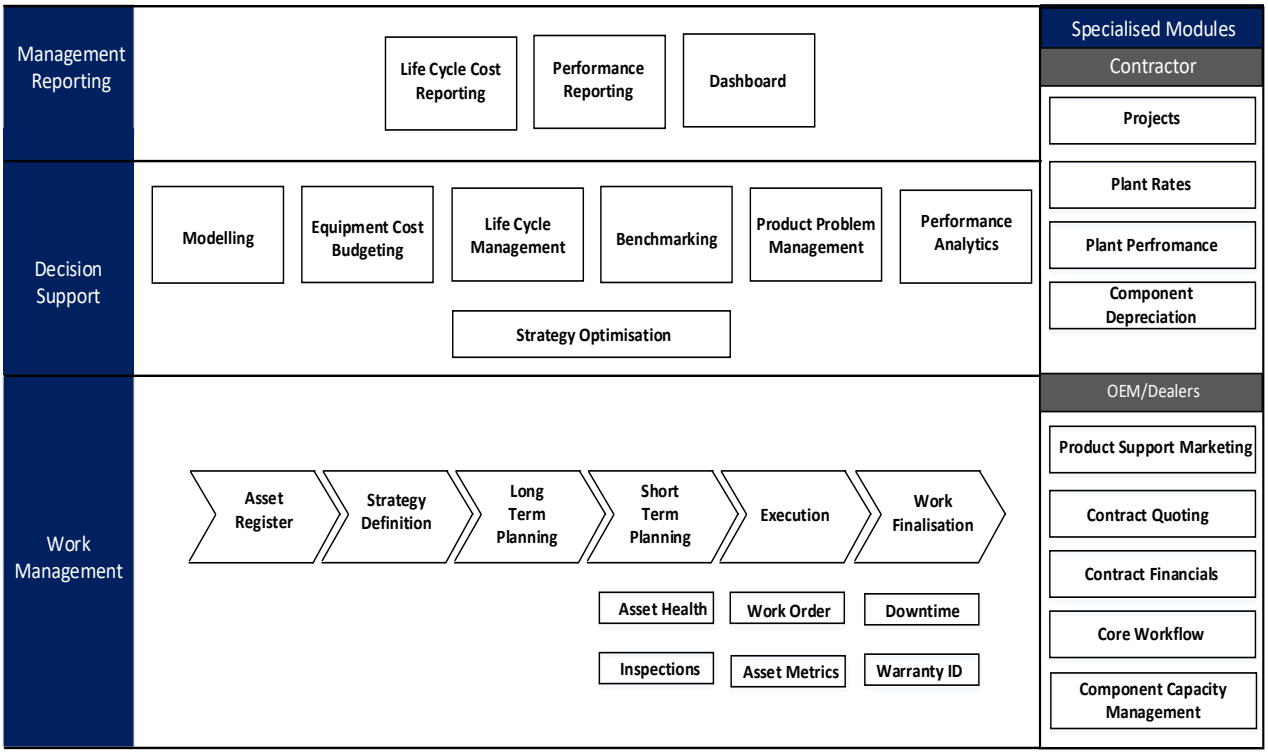

Check your understanding on the workshop and ask any related questions.

Course Outline

Prerequisites	
Target Audience	
Nominal Duration	
Course Objectives	
Learning Outcomes	At the end of the course, participants will have learned to: • Add documents to the library. • Link library documents to strategy tasks. • Search for library documents.
Assessment Strategy	The completion of workshop tasks
AMT Version	8.26

Introduction to AMT

AMT is a comprehensive asset management system consisting of integrated modules as depicted below.

OVERVIEW

The Library module of AMT provides a single repository for a variety of equipment management related documents. These documents can include corporate guidelines, procedures, workscopes (equipment specific job instructions) and technical updates.

You can group documents for specific tasks. As the Library is web-based, users from different sites can access it. This means your organisation can leverage the efforts of individual sites and standardise processes. This results in improved efficiency and quality work performed.

Unlike earlier versions of AMT, the jobs created in the Library do not link automatically to strategy tasks. Rather, the task will link to documents in the library that have the same:

- Branch
- Model
- Component code
- Task type

The Library functionality allows linkage between AMT standard jobs, strategy tasks and work orders with SharePoint documents. Users are prompted to supply the appropriate SharePoint credentials to access documents linked in SharePoint from AMT. Both on-premises and cloud-hosted SharePoint deployments are supported.

Training Workshops

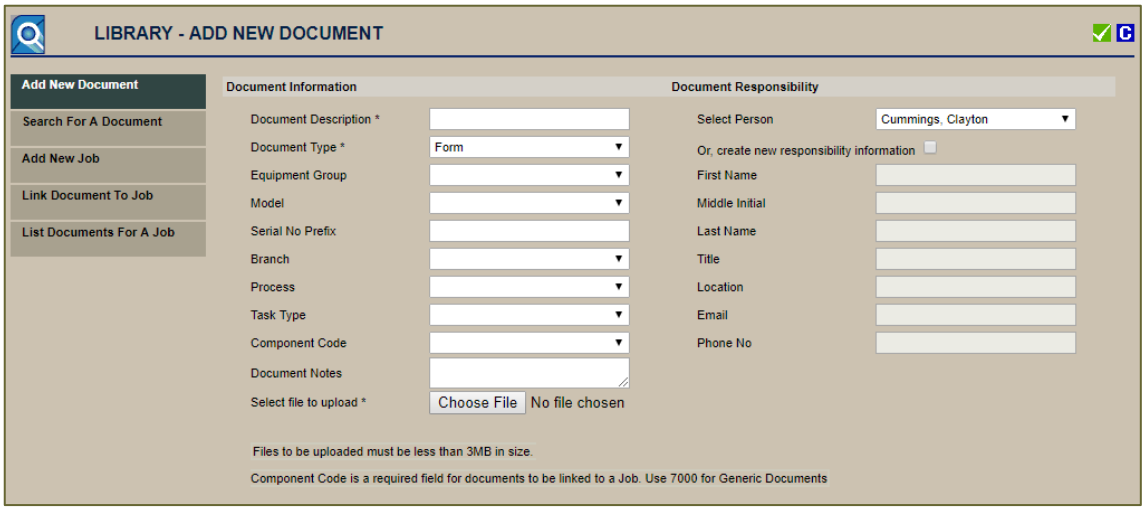

1. Add Documents to the Library

Any kind of electronic document can be stored in AMT's Library. However, it is important to consider the size of files that you upload to the library. Larger documents will take longer for users to download.

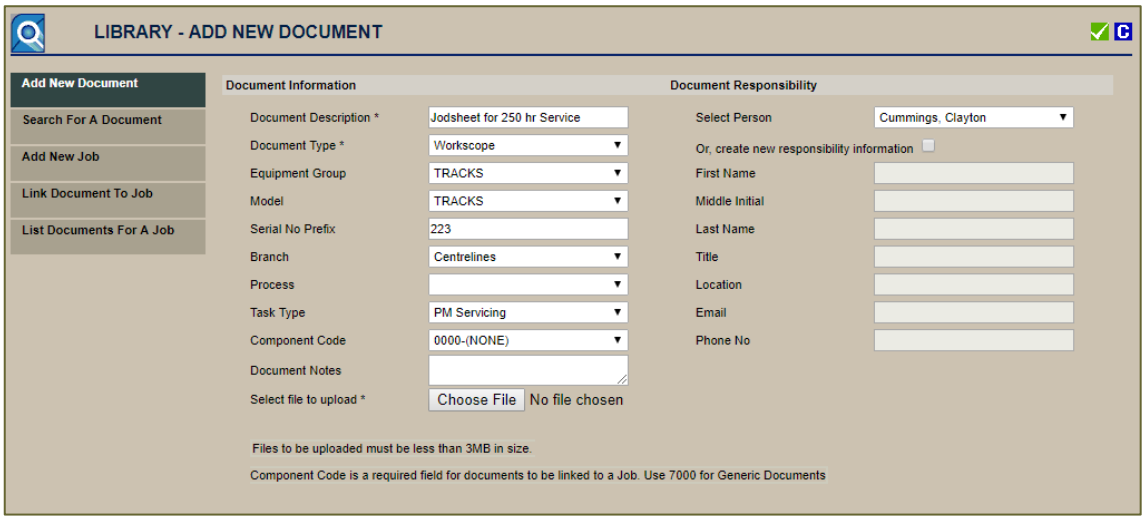

A message will appear confirming the success or failure of the linking process. The time it takes to save the file depends on the size of the file and the speed of the network.

Procedure – Adding a Document

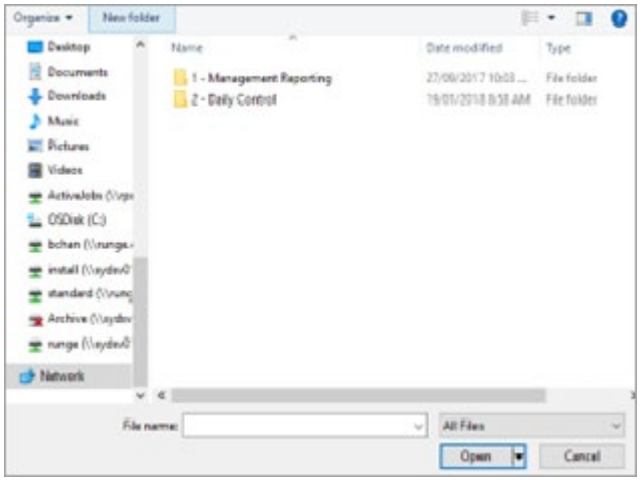

1. Under **Knowledge Database**, double-click **Library**.
2. The **Library Search Window** displays. The AMT Library functionality is a webpage; you can use the **navigation** buttons as you would on other webpages.
3. Click **Add New Document**.

4. The first time you add a document, enter the **Document Responsibility** details in the right side of the screen. This only needs to be done once to add the details to the AMT database.
5. Fill in the **necessary fields** relating to the document and click **Choose File**.

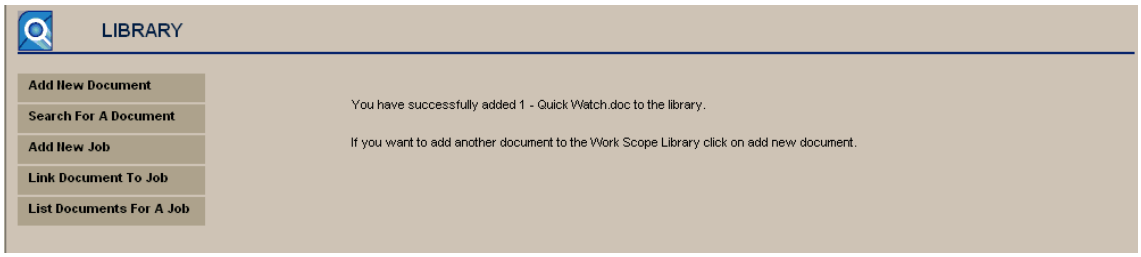

6. Browse to the required document and click **Open**.

Ensure you use a standard naming protocol when you add documents; finding documents in the future will be easier for your colleagues.

Errors may occur due to Network firewalls or security settings that prevent the upload of documents from your computer, or the document is too large and the process times out.

7. Click **Save** after the document is added to the library.
8. The document can now be added to a work order, standard job, or projection.

2. Link Library Documents to Strategy Tasks

You can set up documents in the library that will link to a strategy task and its work order when created in Planning.

From a planning perspective, this ensures that all related documents are referenced each time a particular task is scheduled in the maintenance plan and does not rely on you manually linking them.

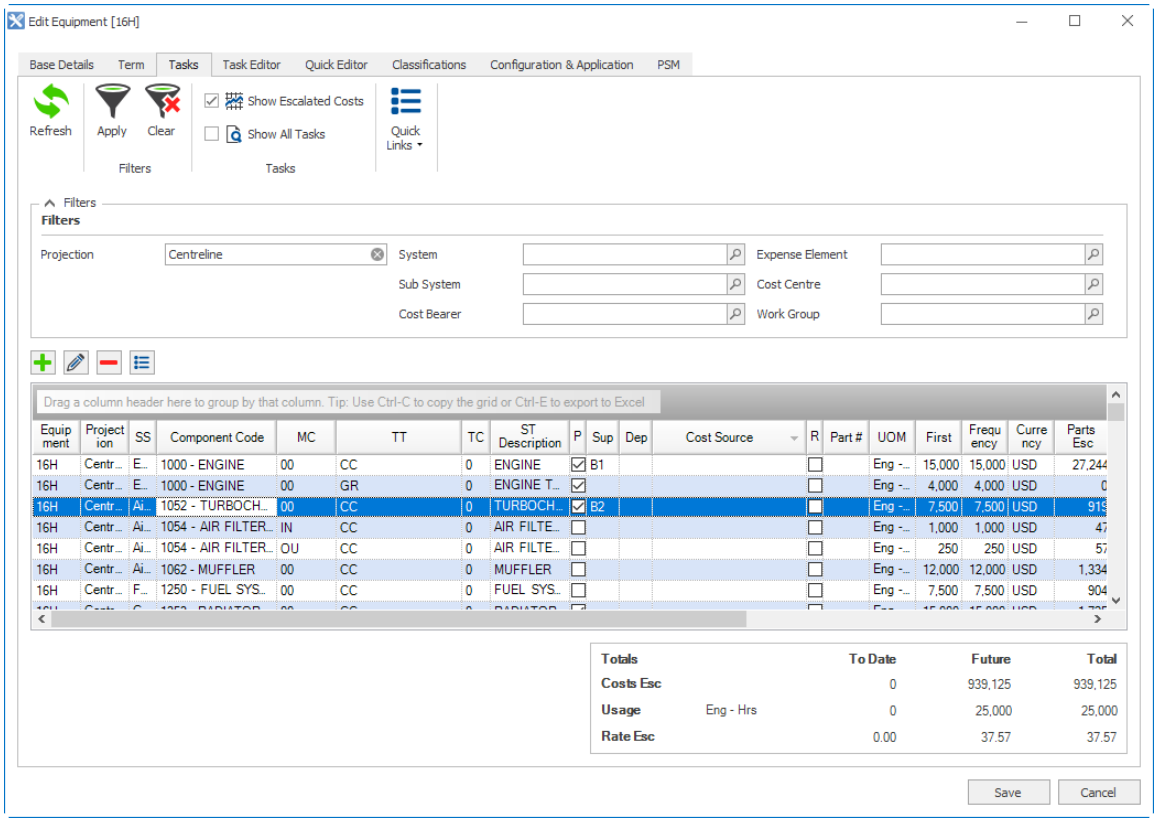

The exercise demonstrates how library documents can be configured to automatically link to a strategy task.

Procedure – Link Library Documents to Strategy Tasks from Library

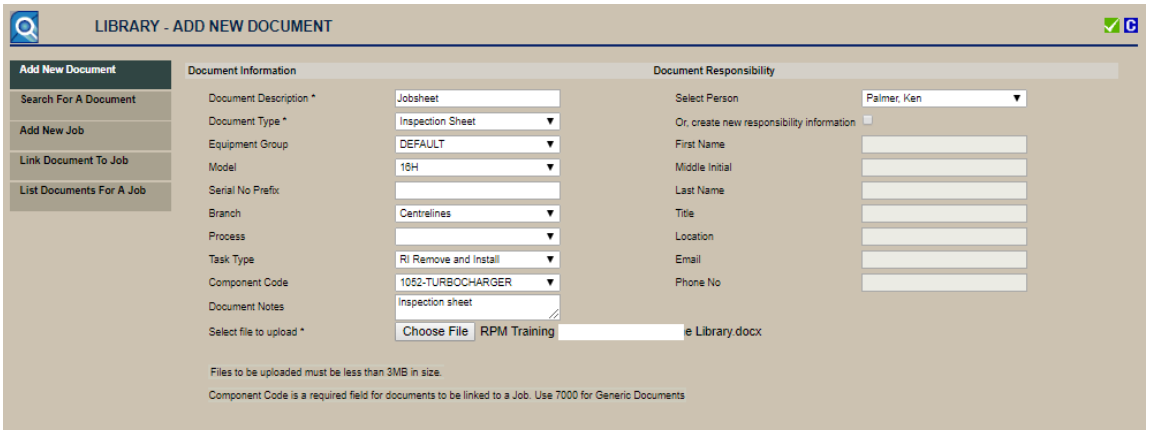

1. Check the strategy task coding that you want to link documents to.

Required Codes for Auto–Linking Documents:

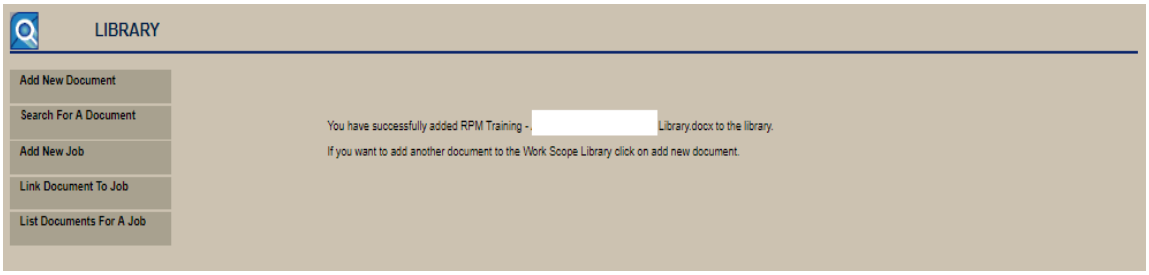

- *Equipment Model*
- *Component Code*
- *Task Type*
- *Job Code*

2. Open the Library and click **Add New Document**.
3. Complete all mandatory fields (all fields that are marked with an asterisk).

4. Complete all fields that are required to link documents.
5. When all details are entered, click **Save**.

6. When this task is next scheduled, the relevant documents will display automatically in the **Planning** tab of the EQS task.

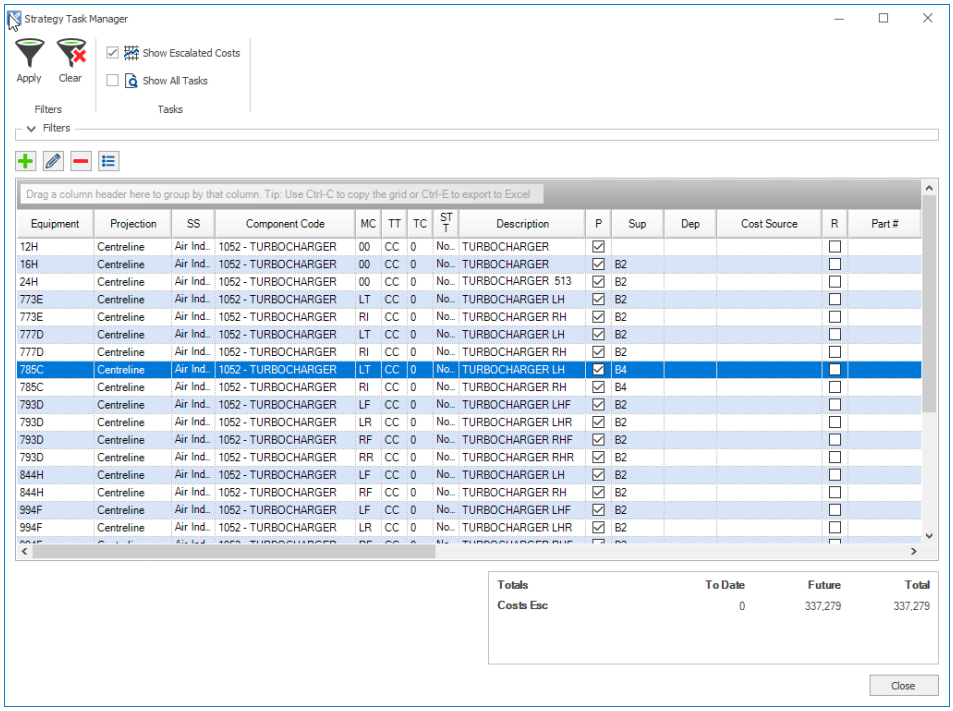

Tasks that are created manually need to have the library documents linked manually.

*To manually add a library document, go into the **Task Instructions** tab within the strategy task and click **Add**.*

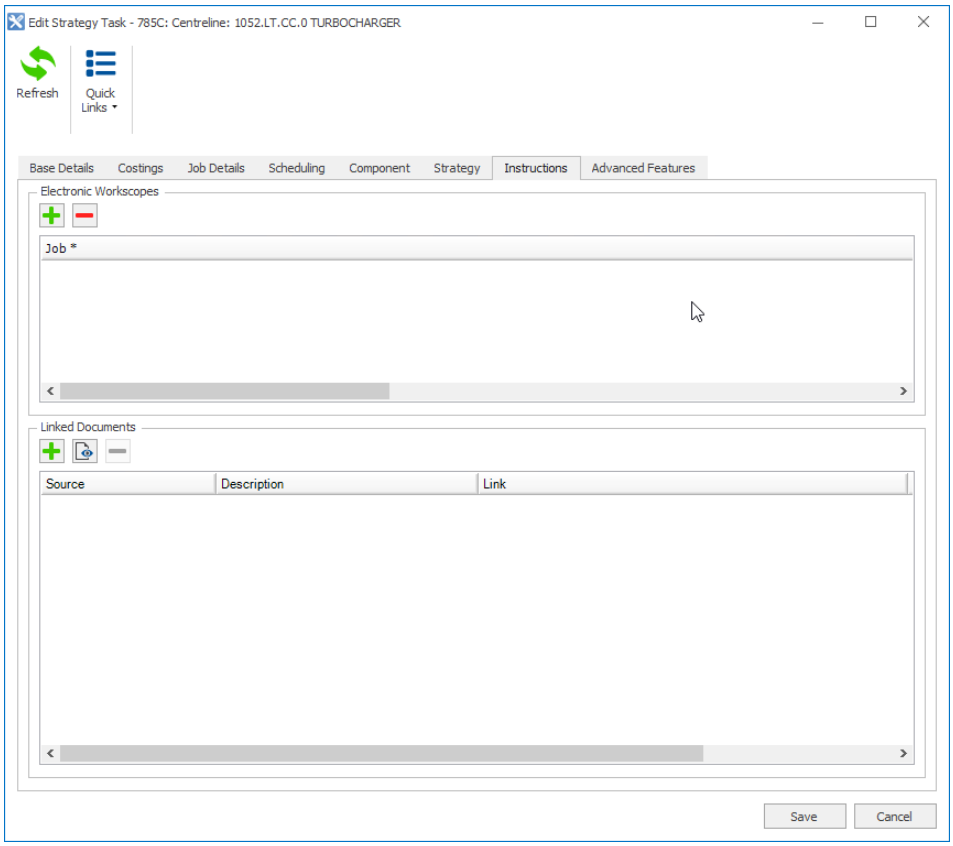

Procedure – Link Library Documents to Strategy Tasks from Strategy Task Manager

Tasks that are created manually need to have the library documents linked manually.

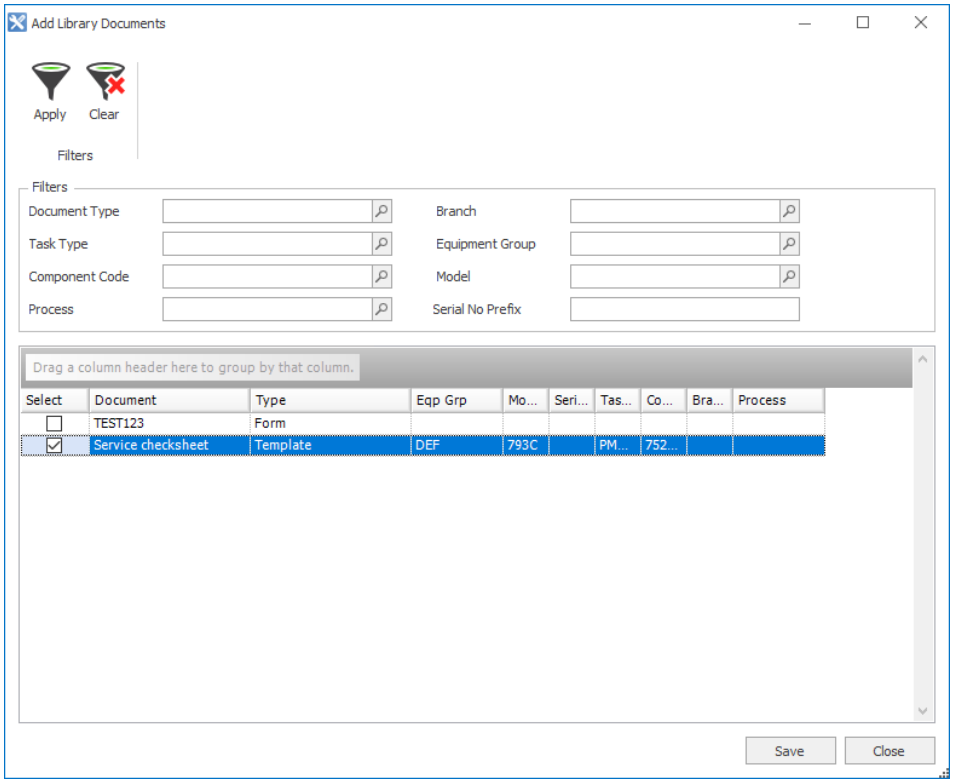

1. Open a strategy task from **Strategy Task Manager**.

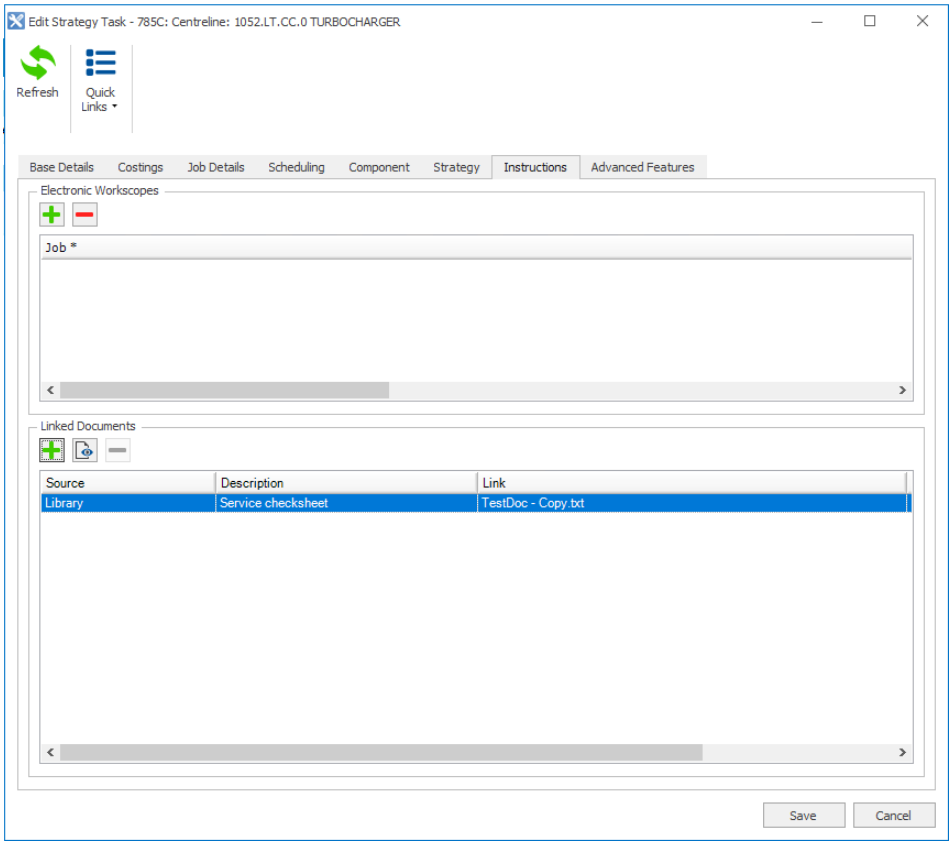

2. Open the strategy task and go to the **Instructions** tab. In the **Linked Documents** pane, click **Add**.

3. Apply a filter and select the document. Click **Save**.

4. The document is added to the strategy task. When this task is next scheduled, the relevant documents will display in the **Planning** tab of the EQS task.

Learning Check

Check your understanding of the workshop and ask any related questions.

Notes

3. Search for Library Documents

Procedure – Searching for Documents

After documents have been uploaded to the library, you can search for them and download a copy to your local computer.

1. Open the **Library**.
2. Click **Search for a Document**.
3. Select any combination of search criteria and click **Apply Filters**.
4. To view the document, click **Print/Preview**.

   A copy of the selected document is downloaded and displays on your computer.

4. Library Jobs

Procedure – Adding a Job to the Library

1. Open the **Library**.
2. Click **Add New Job**.
3. Complete all required fields.
4. Complete any of the other additional fields that will help your colleagues to identify the job.

   For a document to display as available in the **Planning** screen, the combination of model and component code and task type must match that of a strategy task.

Procedure – Linking Documents to a Job

1. Open the **Library**.
2. Click **Link Document to a Job**.
3. To select a job, enter part of the job's name in the text box and click **Apply Filters**.
4. A list of jobs that match the criteria display.
5. Click **Select** next to the job you want.
6. Select a **Document Type** and a **Component Code**, then click **Apply Filters**.
7. Select the check box to link the documents to the job.
8. Click **Link to Job**.

Procedure – List Documents for a Job

1. Open the **Library**.
2. Click **List Documents for a Job**.
3. Select filters such as **Component Code** or **Model** and click **Apply Filters**.

   A list of jobs that match the criteria displays.
4. Click **Select** next to the job.
5. To print the document, you can either:
   a. Click **Print/Preview** to view the document
   b. Right-click **Print/Preview** and select **Print Target** to print the document directly.
   c. Right-click **Print/Preview** and select **Save Target As** to save the document onto your local computer.

Learning Check

Check your understanding of the workshop and ask any related questions.
