Asset Management Framework

INTRODUCTION

The Asset Management Framework and Policy define how Glencore Copper manages the **whole of life of an asset** to ensure optimal value is extracted by ensuring that assets are capable of meeting business and stakeholder objectives.

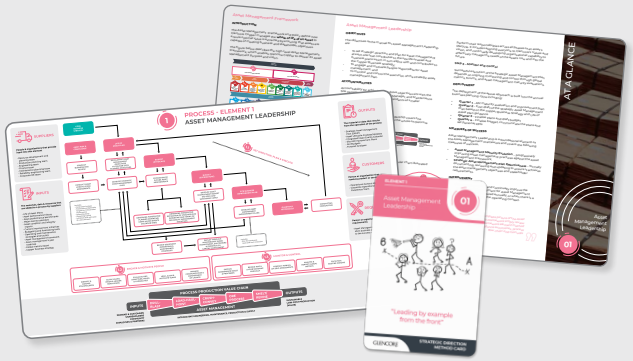

The figure below describes the high-level Asset Management Framework, which enables Glencore Copper to deliver its Asset Management purpose and vision.

This **at a glance summary** is designed to be an introduction to the **Asset Management Leadership Manual** which is one of 18 elements within the Asset Management Framework.

The framework is introduced using a suite of tailored documents. The **method card** is designed to generate thought and discussion around work management. This **at a glance summary** introduces Asset Management Leadership, its objectives, approach, deployment and measures of success. The subsequent **process flow charts** provide a detailed step by step description of how to execute Asset Management Leadership.

These documents are deliberately simple and easy to read and can be used as **communication tools** to share leading practice Asset Management Leadership. Each element has its own method card, at a glance summary and process flow charts.

Asset Management Leadership

OBJECTIVES

The objectives of the manual for Asset Management Leadership are:

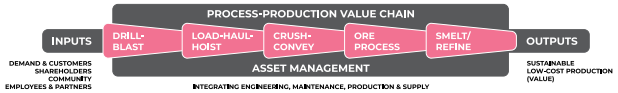

- To set strategic direction and plan for asset management at each site that contributes to the site life of asset and business plans which in turn aligns with and contributes to the Copper Business Strategy;
- To engage and motivate people responsible for asset management, and
- To monitor and control the execution of the strategic asset management plan.

ACCOUNTABILITIES

Accountability for achieving the above objectives sits with the Site General Manager, Engineering Manager, and Maintenance Manager or the equivalent Superintendents at smaller operations.

SCOPE

The scope for Asset Management Leadership covers the strategic plan and its execution across the whole of Glencore Copper's production value chain.

APPROACH

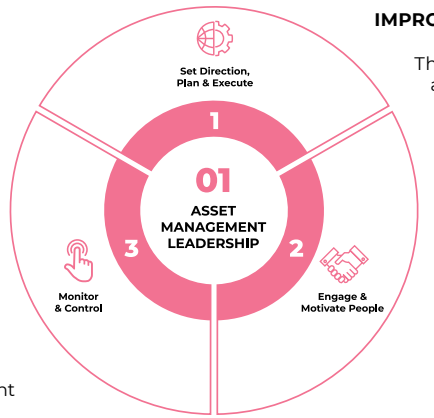

The approach is described through the circular chart illustrated shown to the right.

Step 1 - Set Direction, Plan & Execute

It's all about translating the Copper Business Strategy and the site's Life of Asset Plan into a Strategic Asset Management Plan and Budget, and the subsequent deployment of the plan and budget through other elements such as Maintenance Work Management, Shutdown and Overhauls Management and Capital Investment Decision-Making.

Step 2 – Engage and Motivate People

We forge a proactive work environment and culture where people effectively perform their responsibilities across all phases of an asset's lifecycle. It includes aligning everyone to Glencore's Values and vision, and continually developing organisational capability to effectively manage the needs of the assets now and into the future.

Step 3 – Monitor and Control

Successful execution of the Strategic Asset Management Plan depends on ongoing monitoring and control through global metrics, forums, and asset management maturity evaluations.

DEPLOYMENT

The deployment of the above approach is built into the annual business planning cycle including:

- **Quarter 1** – AM maturity evaluation and improvement plan
- **Quarter 2** – First draft of the Strategic Asset Management Plan based on the Copper Business Strategy and Life of Asset Plan guidance
- **Quarter 3** – Finalise Plans and draft budget
- **Quarter 4** – Finalise budget, communicate the Plans and set personal KPIs

MEASURES OF SUCCESS

Asset Management Leadership is a foundational element of the Asset Management Framework and covers the following measures of success:

- **Asset Management Maturity Evolution** – progressively improving asset management practices against the Asset Management Framework.
- **Strategic Asset Management Plan Effectiveness** – formally documenting, reviewing and updating to ensure it achieves the asset management objectives and stakeholder requirements.

IMPROVEMENT

The process to review and continually improve the approach and deployment for Asset Management Leadership is scheduled annually, or when there is a sudden change in the Operating Context.

For a complete picture of the Asset Management Framework simply review the other framework element method cards, at a glance summaries, process flow chart and manuals.
