Asset Management Framework

INTRODUCTION

The Asset Management Policy and Guidelines define how Glencore Copper manages the **whole of life of an asset** to ensure optimal value is extracted by ensuring that assets are capable of meeting business and stakeholder objectives.

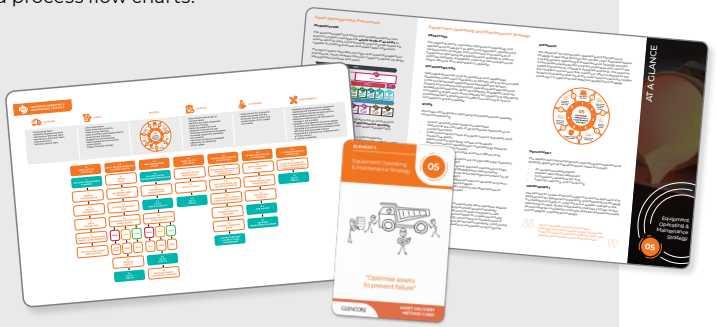

The figure below describes the high-level Asset Management Framework, which enables Glencore Copper to deliver its Asset Management purpose and vision.

This **at a glance summary** is designed to be an introduction to the **Equipment Operating and Maintenance Strategy** which is one of 18 elements within the Asset Management Framework.

The framework is introduced using a suite of tailored documents. The **method card** is designed to generate thought and discussion around work management. This **at a glance summary** introduces Equipment Operating and Maintenance Strategy, its objectives, approach, deployment and measures of success. The subsequent **process flow charts** provide a detailed step by step description of how to execute Equipment Operating and Maintenance Strategy.

These documents are deliberately simple and easy to read and can be used as **communication tools** to share leading practice Equipment Operating and Maintenance Strategy. Each element has its own method card, at a glance summary and process flow charts.

Equipment Operating and Maintenance Strategy

OBJECTIVES

The objective of this manual for Equipment Operating and Maintenance Strategy is to define the approach, deployment, measurement of results, and continuous improvement of Equipment Operating and Maintenance Strategy in order to optimise reliability, availability, costs and risk throughout an asset's lifecycle from acquisition to disposal.

ACCOUNTABILITIES

Dedicated resources must be assigned, and capabilities developed within each Operation to identify work to be included in the Computerised Maintenance Management System (CMMS) and to deliver Equipment Operating and Maintenance Strategy processes that optimise reliability, availability and risk. Considering single point accountability for Equipment Operating and Maintenance Strategies and effective training to ensure competency and knowledge.

SCOPE

The scope of Equipment Operating and Maintenance Strategy covers the following:

- Ensure all productive assets are identified
- Determine the criticality of all productive assets down to component level
- Determine the functions and performance standards of all productive assets
- Determine the operating context of all assets
- Determine tactics development methodology based on current equipment criticality
- Determine the failure modes and their effects of all productive assets
- Ensure critical requirements are incorporated (eg: Statutory, Regulatory and HSE etc)
- Develop and logically group planned maintenance tasks
- Define bills of material (BOMs)/parts requirements
- Develop and optimise the Asset Management Plans for all Critical productive assets
- Utilise the Asset Management Plans to develop long term forecasts and annualised budgets
- Measure and continually improve the effectiveness of planned maintenance tasks.

MEASURES

Performance must be measured for each operation against the Equipment Operating and Maintenance Strategy Key Performance Indicators to ensure compliance with business processes. The foundation for measures include; monitoring and reporting; committing to development of tactics; conducting routine performance analysis; conducting process compliance evaluations; and performing ongoing refinement activities.

APPROACH

The approach for Equipment Operating and Maintenance Strategy is described through the circular chart illustrated below. The Equipment Operating and Maintenance Strategy Process is somewhat shaped by the inherent processes upon which the CMMS Maintenance module is designed and built. The intent of the workflow is to ensure that maximum effort is applied to the systems and assets that are of the most value to Glencore Copper resulting in a rapid and cost-effective deployment strategy.

DEPLOYMENT

The deployment of the Equipment Operating and Maintenance Strategy approach across all business areas is through:

- An awareness presentation
- Position description alignment
- Competency assessments, and
- Training, coaching, and mentoring

IMPROVEMENT

The process to review and continually improve the approach and deployment for Equipment Operating and Maintenance Strategy is scheduled annually, or when there is a sudden change in the Operating Context. As the organisation matures a longer review period could be considered. Criticality shall be reviewed annually, and strategies modified accordingly.

For a complete picture of the Asset Management Framework simply review the other framework element method cards, one pagers, process flow chart and manuals.
