Asset Management Monitoring, Audit & Assurance

18

Asset Management Systems, Monitoring, Audit & Assurance

Operational Excellence, Glencore Copper
06 June 2022, Version 1.0

To close out the drafting of the manual a workshop was held with the following stakeholders in May 2022:

- Osvaldo Zamorano (Glencore Copper Asset Management – Metallurgical Assets)
- Nicolas Fortin (Horne-CCR)
- Yan Letourneau (Horne-CCR)
- Ikechukwu Iheanacho (CSA)
- Maximo Rojas (PASAR – *remote revision)*
- Nicholas Taylor (Glencore Copper commercial team - *remote revision)*
- Neale Laffin (Queensland Metals – Glencore Zinc)
- Robert Farrell (Murrin Murrin Operations – Glencore Nickel)
- Probin Konwar (Murrin Murrin Operations – Glencore Nickel)
- Sagar Karde (Murrin Murrin Operations – Glencore Nickel)
- Rohan Reisener (Glencore Copper Asset Management - Australia)
- Dino Moll (Glencore Copper Asset Management - Australia)
- Anthony Green (Glencore Copper Asset Management - APAC)
- Akeem Araoye - (Glencore Copper Asset Management – North America)
- Yuri Yurac - (Glencore Copper Asset Management – South America)
- Lawrence Hlatshwayo - (Glencore Copper Asset Management – Africa)

Supported by the AM Network Pty Ltd and Work Management Solutions Pty Ltd

Preface

The Asset Management Framework, Policy and Manuals are intended to provide leading Asset Management practices when applied and will be continually improved for the benefit of Glencore Copper.

The real value of sharing the knowledge gained from the use of these documents will come from continued discussion of the issues and rationale behind each document rather than by reading and interpreting them as individuals.

Readers are encouraged to consider these against our values around Safety, Responsibility, Simplicity, Integrity, Openness and Entrepreneurialism and how they reflect our Purpose – to responsibly source the commodities that advance everyday life. This document lays out the minimum standard for Glencore Copper and compliance to this manual will demonstrate a maturity value equal to Planned/Deployed (3) on the Glencore Copper Asset Management Maturity Scale.

1. Introduction

The Asset Management Policy and Manuals define how Glencore Copper manages the whole of life of an asset to ensure optimal value is extracted by ensuring assets are capable of meeting business and stakeholder objectives.

Figure 1-1 describes the high-level Asset Management Framework, which enables Glencore Copper to deliver its Asset Management purpose and vision.

FIGURE 1-1 ASSET MANAGEMENT FRAMEWORK

2. Objectives

The objective of this manual for Asset Management Monitoring, Audit and Assurance is to ensure:

- That improvement in asset performance requires implementation of the Asset Management Framework leading practices.
- Measuring and continually improving asset management capability – capability in people, processes and systems, along with physical assets, which directly contributes to Glencore Copper's aspiration to achieve unrivalled asset performance.
- Adequacy and effectiveness of the asset management system in place.
- Improve risk and control assurance.
- To bring together, promote and strengthen asset management including exchange and alignment of asset management practices.
- An increase in maturity of asset management practices to increase the likelihood of achieving safety, production and cost objectives.
- That asset management controls are in place and are complied with.

Copyright © Glencore 2022

2.1 Accountabilities

Dedicated resources must be assigned and capabilities developed within each Operation to identify work to be able to deliver Asset Management Monitoring, Audit and Assurance process that enable effective delivery of the Asset Management objectives.

Assign accountability for each or all of the following:

- Self-Evaluation of Asset Management Maturity
- External-Evaluation of Asset Management Maturity
- Improvement Opportunities identified and prioritised
- Leadership Team Review
- Site Wide Action Plan Developed
- Asset Management Framework continuously improved.

2.2 Scope

This manual is to be read in conjunction with the following:

- Capital Management Framework (CMF)
- Glencore Corporate Risk Framework
- All Asset Management Framework (AMF) elements
- Asset Management Maturity Self-Assessment Guideline.

The scope includes:

- Ensuring alignment with the requirements of ISO 55001 Asset Management, Management System - Requirements and ISO 19011 Guidelines for Auditing Management Systems.
- Ensuring the asset management function is responsive and agile, so assets continue to meet Glencore Copper's business and strategic objectives and deliver value.
- Ensuring an adequate and effective Glencore Copper asset management system is in place, managed and improved.
- Ensuring stable and predictable production and costs.
- Identify changes in the organisation's risk profile or issues and ways to overcome these challenges.

3. Definitions

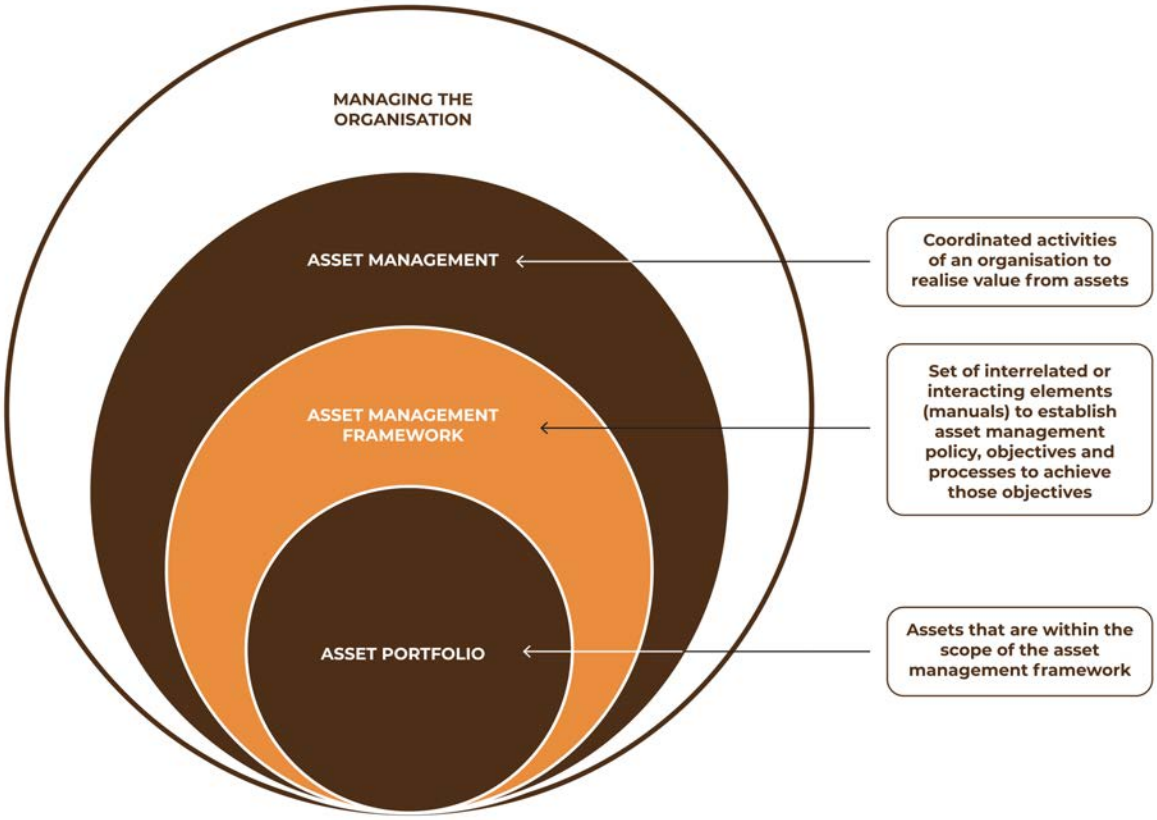

Asset Management System (AMS) – is the collection of the various tools and techniques used to establish AM policy and AM objectives. The AMS is not software but can include software (such as SAP, RMS, DMS etc.) if required to establish the policy and the objectives. Typical contents include:

- Policies
- Strategies
- Plans (SAMP, AMPs, Risk Management, Maintenance, Financial, Management of Change)
- Documents (Framework, Manuals, Standards, Guidelines)
- Processes and Procedures
- Roles and Responsibilities
- Information Management.

Figure 3-1 below demonstrates the relationship between asset management and the asset management framework:

Copyright © Glencore 2022

FIGURE 3-1 RELATIONSHIP ASSET MANAGEMENT AND ASSET MANAGEMENT FRAMEWORK

Asset System – set of physical assets (group) that interact or are interrelated.

Certified Asset Management Assessor - an individual with knowledge and qualifications required to be an auditor/assessor of asset management systems.

Corrective Action – action to eliminate the cause of a nonconformity and to prevent recurrence.

SMART – a process used for setting goals, consisting of "Specific", "Measurable", "Achievable", "Relevant" and "Time-bound".

4. Approach

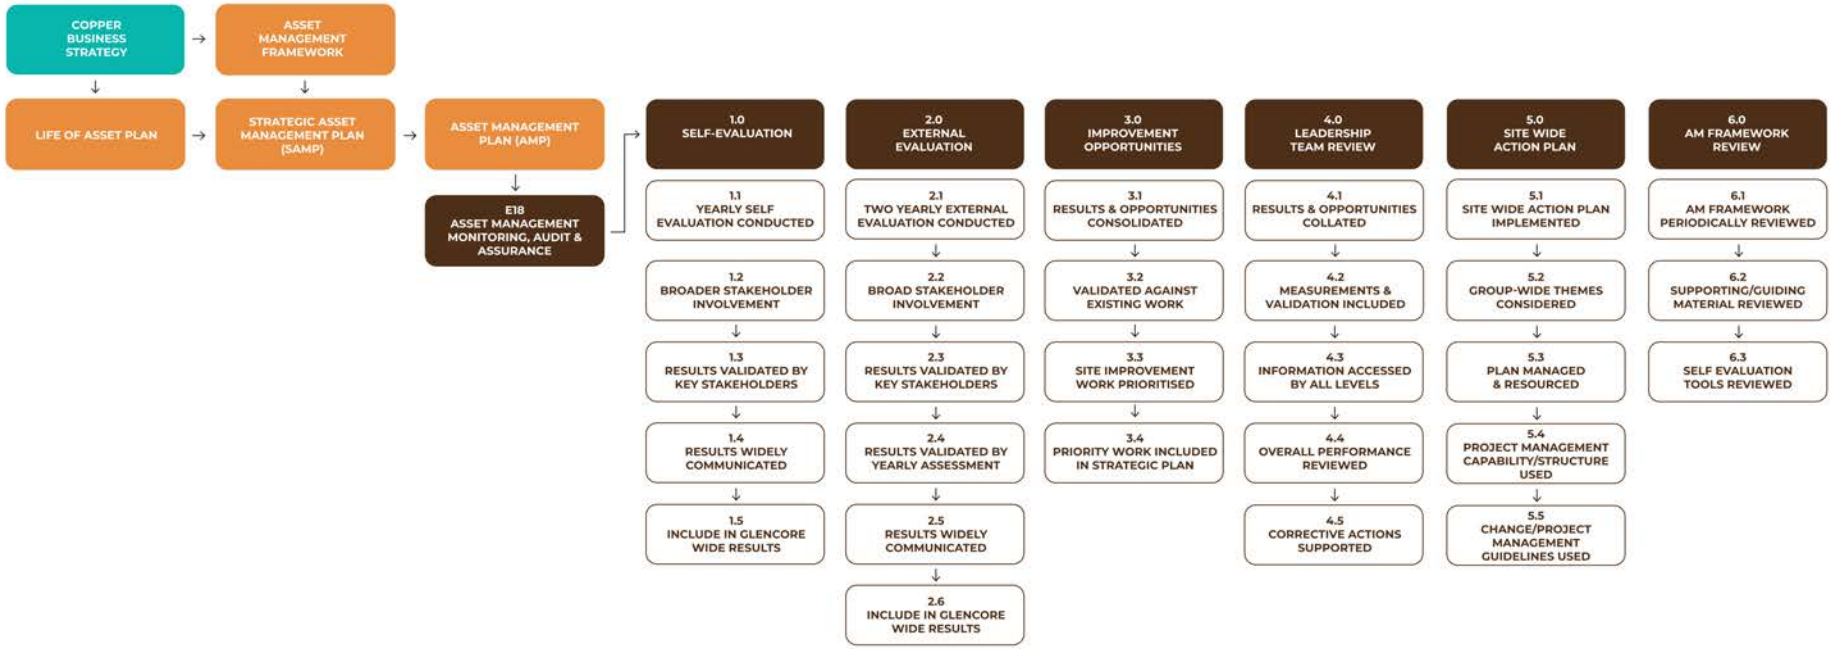

The approach for Asset Management Monitoring, Audit and Assurance is described through:

- Process Flow - pictorially illustrates the key Asset Management Monitoring, Audit and Assurance activities, refer to Figure 4-1.
- Process Description – defines in more detail the key Asset Management Monitoring, Audit and Assurance activities, refer to Section 4.2.
- Process RACI Matrix – indicates for each activity, the Functions who are responsible, Accountable, who are Consulted prior to final decision/action and those who are Informed of any outcomes and actions, refer to Section 4.3.

4.2 Process Description

TABLE 4-1 ASSET MANAGEMENT MONITORING, AUDIT AND ASSURANCE PROCESS DESCRIPTION

PROCESS STEP	DESCRIPTION
1.0 Self Evaluation	**Completing the Asset Management Framework self-assessed evaluation (first line assurance) annually to provide a baseline for future diagnostic validation.**
1.1 Yearly Self Evaluation Conducted	Refer to the Glencore Copper Asset Management Maturity Self-Assessment Guideline. The process evaluates asset management maturity against the 18 elements of the Glencore Copper Asset Management Framework and delivers value through: • Evaluating and Assurance – identifying and closing the site's gaps to standards, benchmarks and leading practises. • Networking – by building relationships with people both from the home site and from other sites within Glencore. • Educating – by raising awareness of leading practises and professional development of participants. • Teamwork – by fostering teamwork and a desire to improve business performance. Using the Glencore Copper Asset Management Maturity Self-Assessment (AMMSA) process and tool, an annual site wide assessment is to be conducted. Assessments should also consider: • if asset management procedures are effective and up to date • processes have been clearly defined, documented and effectively implemented and complied with • there are processes for on-going training and awareness • assets and asset management fulfil their required function • asset management is appropriate to the level of risk faced by the organisation • persons doing work understand their roles and responsibilities • change control processes are in place and operate effectively • any changes that impact the organisation are reviewed in relation to the asset management activities. Assessors shall have experience in conducting asset management system self-assessments and it would be beneficial if an assessor has a formal qualification as a Certified Asset Management Assessor (CAMA).
1.2 Broad Stakeholder Involvement	The assessment is to be conducted with a broad range of stakeholders from the following business functions: • Operations • Maintenance • Technical Service • Finance • Procurement and Supply Chain • Human Resources • Risk Management. Questions to be asked in the assessment are to align with the role the stakeholder holds within the function.
1.3 Results Validated by Key Stakeholders	Results achieved in the assessment are to be tested and validated with key stakeholders. Once validated, results are to be published.

Copyright © Glencore 2022

1.4 Results Widely Communicated	Results of the assessment are to be communicated to the wider site audience. The format of the communication shall be at the discretion of each site, but various mediums and means would be recommended.
1.5 Include in Glencore Copper Wide Results	Results of the assessment are to be communicated to Glencore Copper.
2.0 External Evaluation	**Complete the Asset Management Framework external evaluation (second line assurance) every two years, facilitated by Group Function, including validation of first line assurance.**
2.1 Two Yearly External Evaluation Conducted	To provide assurance and validation of internal asset management maturity self-assessment results, an external assessment is to be carried out by a suitably qualified and experienced asset management consultancy/contractor on a two-yearly basis, against the same requirement that the internal assessment is bound by. Each assessor from the consultant/contractor shall have formal qualifications regarding their authority to undertake formal asset management framework/system assessments. The role of the assessor is to: • Provide strategic knowledge from multiple disciplines and organisations to enable the interpretation of integrated and diverse processes and systems. • Evaluate technical and non-technical aspects of organisations assets management framework/system. • Interrogate and interpret a wide range of documents, system and people.
2.2 Broad Stakeholder Involvement	The assessment by the external body is to be conducted with a broad range of internal stakeholders from the following business functions: • Operations • Maintenance • Technical Service • Finance • Procurement and Supply Chain • Human Resources • Risk Management. Not all functions need to participate in the complete assessment, but during each element evaluation there should be at least the service provider and the receiver of the service to get opinions from both sides. The external assessor is to provide each site with a detailed plan regarding the assessment, consideration should be given to: • Key stakeholders • Timing of the assessment • Assessment participants • Format of the assessment • Format of the assessment results • Format of the assessment report.
2.3 Results Validated by Key Stakeholders	Results achieved in the assessment are to be tested and validated with key stakeholders.
2.4 Results Validated by Yearly Assessment	The results of the external assessment are to be compared with the internal assessment results and any discrepancies are to be tested and addressed as applicable.
2.5 Results Widely Communicated	Results of the assessment are to be communicated to the wider site audience. The format of the communication shall be at the discretion of each site, but various formats and means would be recommended. The communication should also include any discrepancies

Copyright © Glencore 2022

	that are found between the internal and external assessments and how these are going to be addressed.
2.6 Include in Glencore Wide Results	Once discrepancies regarding internal and external assessments have been addressed the results of the assessment are to be communicated to Glencore Copper.
3.0 Improvement Opportunities	**Self-assessed and external evaluation improvement opportunities are incorporated into the site Strategic Asset Management Plan annually.**
3.1 Results and Opportunities Consolidated	Results of the assessments are to be consolidated with other asset management system improvement opportunities identified through the implementation of Element 17 Continuous Improvement Management which requires: • Identification of improvement opportunities • Selection of improvement opportunities
3.2 Validated Against Existing Work	Asset Management System improvement opportunities are to be validated against existing work commitment. Refer to the following to identify current asset management system work commitments: • Strategic Business Plan • Asset Management Improvement Plan • Strategic Asset Management Plan • Asset Management Plan/s • CMMS • Budget – OPEX/CAPEX/Asset Budget Attainability.
3.3 Site Improvement Work Prioritised	Refer to Element E17 Continuous Improvement Management which requires: • Analysis of selected opportunities.
3.4 Priority Work Included in Strategic Plan	Ensure that the highest priority work is included in the Strategic Plan Asset Management Plan and Asset Management Plan/s. Actions need to be clear, have deliverables, date of completion, person responsible, etc. (SMART principle).
4.0 Leadership Team Review	**Collate the self-assessment, measurement and validation processes for access by all levels of the leadership team for reviewing the current asset management system performance against the asset management framework intent, allowing for corrective actions.**
4.1 Results and Opportunities Collated	Once all asset management system improvement opportunities have been finalised, they are to be collated for review by the site leadership team. The leadership team is then responsible for ensuring that the identified improvement opportunities are valid and that they will ensure asset management system improvement and be aligned to the asset management framework. Previous asset management assessment results and improvement projects are to be consulted to ensure that previous opportunities have been actioned.
4.2 Measurements and Validation Included	Once validated the improvement opportunities are to be measured in terms of prioritisation as p Improvement Management which requires: • Analysis of selected opportunities • Improvement projects are managed, resourced and routinely monitored • Project post reviews are carried out • Annual review is carried out.
4.3 Information Accessed by all Levels	The information regarding asset management system improvement opportunities shall be made available to all levels of management to provide an opportunity for all to review and provide input. The format of this information shall be decided by each site.
4.4 Overall Performance Reviewed	The results of the asset management system assessment should be compared to the actual overall performance to confirm alignment between assessment results and actual performance. The responsibility of how this is achieved lies with the site leadership team.

Copyright © Glencore 2022

4.5 Corrective Actions Supported	When a nonconformity has been identified evaluation of the nonconformity is to be conducted to prevent recurrence by: • Take action to control and correct it • Manage the consequences • Review • Determine the cause • Determine if similar nonconformities exist or could occur. All corrective actions identified from the nonconformities shall be managed and supported by the site leadership team.
5.0 Site Wide Action Plan	**Develop and implement a performance measured post-assessment business wide action plan considering group-wide themes.**
5.1 Site Wide Action Plan Implemented	Refer to the Glencore Copper Business, Strategic Asset Management and Asset Management Plans regarding improvement initiatives that have previously been identified and that current asset management systems opportunities align to the business and asset management objective. A site wide action plan is to be developed.
5.2 Group-Wide Themes Considered	Asset Management in Glencore Copper provides both local and group wide benefit, therefore any site wide initiatives that could benefit the group more widely should be identified and communicated to the key group stakeholders.
5.3 Plan Managed and Resourced	A responsible person is to be assigned to the management of the action plan. The responsible person is to ensure that there are enough suitability qualified and experience resources available to implement and manage the plan.
5.4 Project Management Capability/Structure Used	Refer to Glencore Copper Capital Management Framework and Element E17 Continuous Improvement Management to ensure improvement opportunities are managed.
5.5 Change/Project Management Guidelines Used	To ensure that all improvement projects are implemented permanently the Glencore Copper Change Management process is to be followed.
6.0 AM Framework Review	**Periodically review the Asset Management Framework, supporting guiding material and evaluation tools are to be conducted to ensure alignment with evolving Glencore Copper business objectives.**
6.1 AM Framework Periodically Reviewed	Conduct regular review of the Glencore Copper Asset Management Framework to ensure it is relevant and is aligned to and supports the Glencore Copper Business objectives.
6.2 Supporting/Guiding Material Reviewed	All Asset Management Framework supporting material is to be reviewed and updated in conjunction with the Asset Management Framework to ensure alignment
6.3 Self Evaluation Tools Reviewed	The Asset Management self-evaluation tool/s are also to be reviewed and updated in conjunction of the Asset Management Framework to ensure alignment

4.3 Process RACI Description

The RACI matrix below in Table 4-2 addresses the high-level functional elements of the Asset Management Monitoring, Audit and Assurance process. For the overall Asset Management RACI matrix, refer to the Asset Management Intranet page.

Note: The HSE and Commercial Departments do not appear in this high-level RACI, although their involvement will be required from time to time dependent on the nature of the variance.

The codes used in the RACI analysis are defined as follows:

TABLE 4-2 PROCESS RACI

Copyright © Glencore 2022

R	**Responsible**	The "doer" – the individual(s) who will perform an activity or directs others to perform the activity.
A	Accountable	"The buck stops here" –the individual who ultimately "owns" the activity – there should only be one person
C	Consulted	Person that needs to feedback and contribute to the activity
I	Inform	The individual(s) who needs to be informed after a decision or action is taken if relevant. (via 1-way communication)

TABLE 4-3 FUNCTIONAL DESCRIPTIONS

Function	Description
General Management	• Provides input into the validation of asset management assessment results with key stakeholders and those results are widely communicated for both internal and external assessments. • Ensures that assessment results are included in the wider Glencore Copper results for internal and external assessments. • Provides input regarding conducting 2-yearly audits by external assessor. • Provides input into the inclusion of priority assessment management system improvement work is included in the strategic plan. • Provides input for corrective action support. • Provides input for site wide improvement action plan implementation. • Provides input to the consideration of strategic themes. • Provides input for the management and resourcing of the improvement plan. • Provides input regarding review of the asset management framework and alignment to the business objectives.
Corporate Asset Management	• Provides input regarding conduiting evaluations internally and responsible for external. • Provides input with regards to the implementation of site wide action plans • Provides input regarding strategic common theme identification and communication. • Ensures the Asset Management Framework is regularly reviewed.
Maintenance Management	• Ensures that an asset management self-evaluation and external evaluation are conducted, there is broad stakeholder involvement and validation of results and that results are widely communicated. • Responsible for getting results included in the wider Glencore Copper results. • Ensure that improvement opportunities are consolidated, validated against existing work, prioritised and included in the strategic plan. • Ensures that the site leadership team review the assessment results and that opportunities are collated, validated, information can be accessed, overall performance reviewed and corrective actions are supported.

Copyright © Glencore 2022

	• Ensures site wide action plan is implemented, is managed and resources and that project and change management is adopted. • Ensures that common strategic themes are identified and communicated. • Provides input into the review of the Asset Management Framework.
Maintenance Execution	• Responsible for getting asset management self-evaluation and provides input to external evaluation conducted, there is broad stakeholder involvement and validation of results and that results are widely communicated. • Responsible in getting improvement opportunities consolidated, validated against existing work, prioritised and included in the strategic plan. • Responsible for getting the site leadership team to review the assessment results and those opportunities are collated, validated, information can be accessed, overall performance reviewed and corrective actions are supported. • Responsible for getting a site wide improvement action plan implemented, managed and resourced and that project and change management is adopted. • Provides input into the review of the Asset Management Framework.
Maintenance Planning	• Provides input to the internal and external asset management systems assessments, broader stakeholder involvement and results validated. • Provides input regarding result and opportunity consolidation and validating against existing work. • Provides input regarding the review of overall asset management system performance.
Operations Management	• Provides input to the internal and external asset management systems assessments, broader stakeholder involvement and results validated • Provides input regarding result and opportunity consolidation and validating against existing work. • Responsible for getting the site leadership team to review the assessment results and those opportunities are collated, validated, information can be accessed, overall performance reviewed and corrective actions are supported. • Responsible for getting a site wide improvement action plan implemented, managed and resourced and that project and change management is adopted. • Provides input into the review of the Asset Management Framework.
Supply/Warehouse	• Provides input to the internal and external asset management systems assessments, broader stakeholder involvement and results validated • Provides input regarding result and opportunity consolidation and validating against existing work. • Responsible for getting the site leadership team to review the assessment results and those opportunities are collated, validated, information can be accessed, overall performance reviewed and corrective actions are supported. • Responsible for getting a site wide improvement action plan implemented, managed and resourced and that project and change management is adopted. • Provides input into the review of the Asset Management Framework.
Technical Services – Mining, Processing, Engineering	• Responsible for undertaking the yearly internal and provides input to two-yearly external asset management system assessment. • Responsible for identification and management of improvement opportunities.

Copyright © Glencore 2022

	• Responsible for collating the self-assessment, measurement and validation processes for access by all levels of the leadership team for reviewing the current asset management system performance against the asset management framework intent, allowing for corrective actions. • Responsible for the implementation of the site wide action plan and that project and change management is adopted. • Provides input regarding strategic common theme identification and communication. • Provide input into the review of the Asset Management Framework.
Finance	• Provides input to the internal and external asset management systems assessments, broader stakeholder involvement and results validated. • Responsible for the prioritisation of the asset management system work prioritisation. • Provides input into consolidation results and opportunities and validating against current work requirements. • Responsible for having information accessed by all levels of the leadership team and that the overall performance is compared to the assessment results. • Provides input into the collation of results and opportunities and those results are validated and measures. • Provides input into the site wide improvement plan implementation and the plan is managed and resourced. • Provides input into the review of the Asset Management Framework.

5. Deployment

The deployment of the Asset Management Monitoring, Audit and Assurance approach across all business areas is through:

- Awareness presentation
- Position description alignment
- Competency assessment
- Training, coaching and mentoring.

5.1 Awareness Presentation

This Manual is supported by a slide presentation and video to help facilitate communication and to raise awareness on how it contributes to the Asset Management Framework and business success.

5.2 Position Description Alignment

To effectively deploy this Manual, the essential process steps and activities need to be diligently mapped and assigned to approved positions within Glencore Copper.

The RACI matrix assists in the visualisation that everyone is working towards the same goal. It clarifies, not only the individual's responsibilities, but also that of others. It has proven to be an effective tool to quickly understand and close the gaps between current and desired practices and business process activities.

Position descriptions including KPIs need to be aligned to the RACI matrix and measures of success. This is the basis for ongoing performance reviews and the creation and execution of individual development plans.

Copyright © Glencore 2022

5.3 Competency Assessment

This Manual is supported by an Asset Management competencies assessment tool which is used to:

- Guide recruitment, selection, development and deployment of people in asset management roles across the company.
- Provide employees responsible for managing assets with feedback, development, coaching and recognition for their performance.
- Map, build and manage the asset management talent pool across the company.
- Identify strengths and development needs in asset management practitioners.

5.4 Training, Coaching and Mentoring

Coaching and mentoring are another way to assist employees improve their understanding of their role and to improve performance.

Coaching is generally about improving performance in the short term where mentoring is about achieving high performance and career aspirations over a longer term.

Coaching or mentoring requires addressing that a person is not currently up to the required level to perform their role as effectively and efficiently as they could. The build-up of skills to perform efficiently and effectively requires a large investment of time and cooperation.

Coaches and Mentors need to be carefully selected and must be committed for the long term to effect maximum success.

6. Measures of Success

Refer to Glencore Copper's AM Manual E16 Reporting and Performance Management Manual for current KPI's

TABLE 6-1 MEASURE OF SUCCESS

Metric	Compliance to Asset Management Audits
Definition	All Asset Management Audits (internal and external) have been conducted and improvements in the action plan implemented
Performance Indicator	Red – Audits not complete Orange – Audits complete – improvements outstanding Green – Audits and improvements complete
Calculation	NA
Rationale	To ensure each site reaches the defined minimum of three (3) for asset management maturity, as defined in the AMIP Guideline it is important that both internal and external audits are conducted as detailed in this manual. This metric is to ensure that both audits are conducted and any improvement opportunities in the action plan are complete. Each site is responsible for the development of a mechanism by which the metric can be managed.

Copyright © Glencore 2022

7. Improvement

The process to review and continually improve the approach and deployment for Asset Management Monitoring, Audit and Assurance is scheduled Annually, or when there is a sudden change in the Operating Context. As the organization matures a longer review period could be considered.
