GLENCORE

Risk Management & Compliance

14

Operational Excellence, Glencore Copper
30 May 2022, Version 1.0

To close out the drafting of the manual a workshop was held with the following stakeholders in May 2022:

- Osvaldo Zamorano (Glencore Copper Asset Management – Metallurgical Assets)
- Nicolas Fortin (Horne-CCR)
- Yan Letourneau (Horne-CCR)
- Ikechukwu Iheanacho (CSA)
- Maximo Rojas (PASAR – *remote revision)*
- Nicholas Taylor (Glencore Copper commercial team - *remote revision)*
- Neale Laffin (Queensland Metals – Glencore Zinc)
- Robert Farrell (Murrin Murrin Operations – Glencore Nickel)
- Probin Konwar (Murrin Murrin Operations – Glencore Nickel)
- Sagar Karde (Murrin Murrin Operations – Glencore Nickel)
- Rohan Reisener (Glencore Copper Asset Management - Australia)
- Dino Moll (Glencore Copper Asset Management - Australia)
- Anthony Green (Glencore Copper Asset Management - APAC)
- Akeem Araoye - (Glencore Copper Asset Management – North America)
- Yuri Yurac - (Glencore Copper Asset Management – South America)
- Lawrence Hlatshwayo - (Glencore Copper Asset Management – Africa)

Supported by the AM Network Pty Ltd and Work Management Solutions Pty Ltd

Preface

The Asset Management Framework, Policy and Manuals are intended to provide leading Asset Management practices when applied and will be continually improved for the benefit of Glencore Copper.

The real value of sharing the knowledge gained from the use of these documents will come from continued discussion of the issues and rationale behind each document rather than by reading and interpreting them as individuals.

Readers are encouraged to consider these against our values around Safety, Responsibility, Simplicity, Integrity, Openness and Entrepreneurialism and how they reflect our Purpose – to responsibly source the commodities that advance everyday life. This document lays out the minimum standard for Glencore Copper and compliance to this manual will demonstrate a maturity value equal to Planned/Deployed (3) on the Glencore Copper Asset Management Maturity Scale.

1. Introduction

The Asset Management Policy and Manuals define how Glencore Copper manages the whole of life of an asset to ensure optimal value is extracted by ensuring that assets are capable of meeting business and stakeholder objectives.

Figure 1-1 describes the high-level Asset Management Framework, which enables Glencore Copper to deliver its Asset Management purpose and vision.

FIGURE 1-1 ASSET MANAGEMENT FRAMEWORK

2. Objectives

The objective of this manual for Risk Management and Compliance is to ensure that established Glencore Copper Risk Management standards are used in the context of Asset Management, to manage assets to tolerable levels of risk, recognising that risk management as an essential process within the Asset Management Framework and that there are clear processes and roles established to manage risk.

2.1 Accountabilities

Dedicated resources must be assigned and capabilities developed within each Operation to identify work to be able to deliver Risk Management and Compliance processes that enable effective delivery of the Asset Management objectives

Assign single point accountability for each or all the following:

- Asset risks managed
- Asset compliance
- Asset documentation management

Copyright © Glencore 2022

- Risk awareness, skills and capability
- Asset Risk Management effectiveness.

2.2 Scope

This manual is to be read in conjunction with:

- Group Enterprise Risk Management Standard
- Glencore Copper Corporate Risk Management Framework
- Life of Asset
- Strategic Asset Management Plan(s)
- Asset Management Plan(s)
- Asset Budget Attainability Guideline.

The scope includes, ensuring:

- Risk management is embedded through a structured management framework that establishes a common approach throughout Glencore, for identifying, assessing, treating and monitoring asset management risk.
- Legislation, standards and guidelines are frequently assessed and updated to ensure continued compliance.
- Asset management risks are managed at the appropriate point in the asset lifecycle.
- Significant or recurring risks have been identified and appropriately managed.
- Capability exists to apply efficient and effective asset management risk techniques.
- Current Glencore Risk Management approaches are utilised, monitored and improved.

3. Definitions

As Low as Reasonably Practicable (ALARP) – a concept of cost/benefit when considering risk mitigation and the weighing of the risk against the sacrifice needed to reduce it further.

Asset Integrity - the systematic implementation of activities, such as inspections and tests necessary to ensure that important equipment will be suitable for its intended application throughout its life.

HAZOP - a structured and systematic examination of a complex planned or existing process or operation in order to identify and evaluate problems that may represent risks to personnel or equipment.

High Potential Risk Incidents (HPRI) - includes incidents which could have caused a serious adverse effect on safety and health.

Quantitative Risk Assessment - is a consolidated approach to evaluating the risk level of an operational system, which is traditionally based on the main technical failures leading to potential accident scenarios.

Risk – The effect of uncertainty on objectives:

- An effect is a deviation from the expected – positive or negative.
- Objectives can have different aspects (such as health and safety, environment, financial impact, image, reputation, community, legal and compliance) and can apply at different levels (such as strategic, organisation-wide, project, product and process).
- Risk is often characterised by reference to potential events and consequences, or a combination of these.
- Risk is often expressed in terms of a combination of the consequences of an event (including changes in circumstances) and the associated likelihood of occurrence.
- Uncertainty is the state, even partial, of deficiency of information related to understanding or knowledge of an event, its consequences, or likelihood.

Copyright © Glencore 2022

Risk Management – a process to identify possibilities, measure risks and create strategies to manage risks before they occur.

Safety Critical System - is a system whose failure or malfunction may result in one (or more) of the following outcomes:

- death or serious injury to people
- loss or severe damage to equipment/property
- environmental harm.

4. Approach

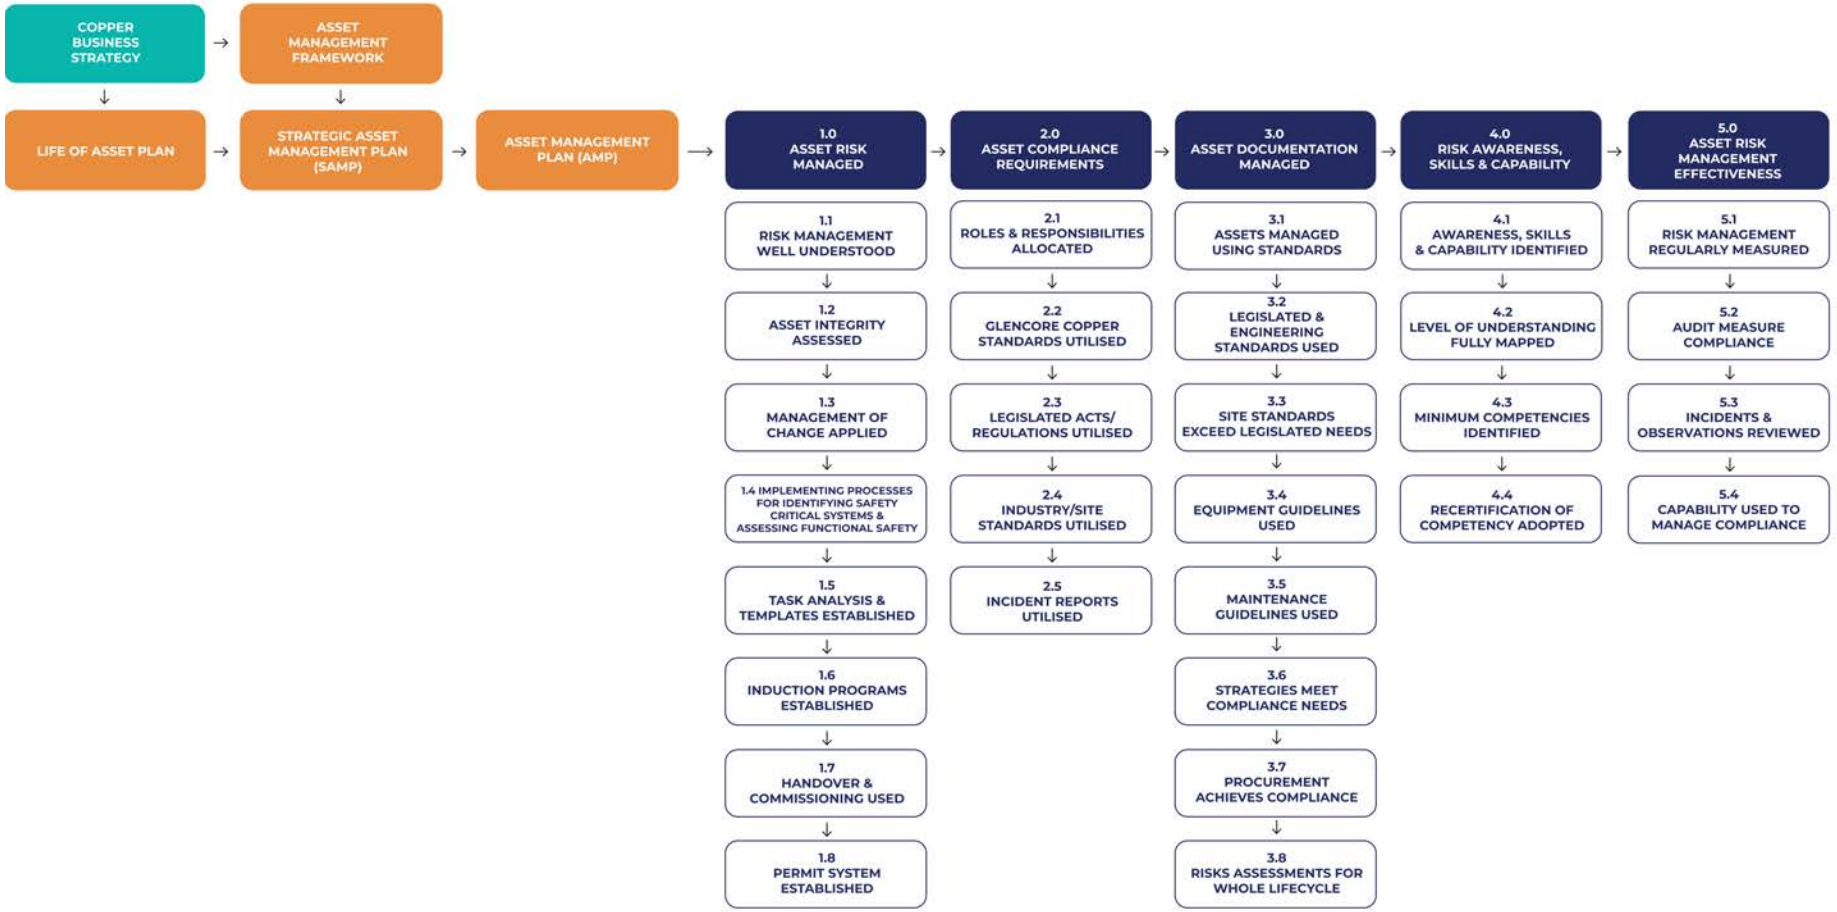

The approach for Risk Management and Compliance is described through:

- Process Flow - pictorially illustrates the key Risk Management and Compliance activities, refer to Figure 4-1.
- Process Description – defines in more detail the key Risk Management and Compliance activities, refer to Section 4.2.
- Process RACI Matrix - indicates for each activity, the Functions who are responsible, Accountable, who are Consulted prior to final decision/action and those who are Informed of any outcomes and actions, refer to Section 4.3.

4.2 Process Description

TABLE 4-1 RISK MANAGEMENT AND COMPLIANCE PROCESS DESCRIPTION

PROCESS STEP	DESCRIPTION
1.0 Asset Risk Management	**Ensure asset management processes for risk assessment and management are developed, understood and implemented across the whole asset's lifecycle in line with Glencore HSEC standards.**
1.1 Risk Management Well Understood	Each site is responsible for ensuring that risk management is well understood and established. There are many sources available for reference to understand and develop Risk Management processes such as: • Glencore Copper Corporate Risk Management Framework • Glencore Copper HSEC Standard • Glencore Copper Asset Budget Attainability Guideline. Examples of Risk Management approach could include: • Reliability Centred Maintenance (RCM) and Failure Modes Effects Criticality Analysis (FMECA): ○ Corporate RCM and (FMECA) processes have been developed for Glencore Copper. Refer to: • Element E05 Equipment Operating and Maintenance Strategy Manual • Asset Criticality Analysis Standard • Maintenance Tactics Development Standard. • Hazard and Operability Study (HAZOP) The expectation for HAZOPs is to be completed and has been defined through the Capital Management Framework (CMF). HAZOPs are expected for Intermediate and Major Capital Projects through Pre-Feasibility (business critical or safety critical processes only) and Feasibility phases.
1.2 Asset Integrity Assessed	A process that assesses asset integrity is to be established, a typical asset integrity process consists of the following steps: • Asset Identification • Register Asset • Determine Asset Criticality • Condition Assessment – Develop Condition Rank • Operational Context Assessed • Remaining Life Analysis • OPEX/CAPEX Simulation for remaining life cycle • Determine OPEX/CAPEX for remaining life cycle • Risk Mitigation Strategy • Analyse and improve. Refer to Element E03 Asset Management Planning which provides further details regarding asset integrity management.
1.3 Management of Change Applied	Risk assessment and management processes are to be developed and implemented with the intent of embedding the processes permanently withing Glencore Copper. A management of change process is to be applied to embed the processes, as per the Management of Change approach in the Group Enterprise Risk Management Standard.
1.4 Implementing processes for identifying safety critical systems and assessing functional safety.	There are a number of approaches for the identification of Safety Critical Systems (SCS): • Risk Based – Qualitative, typically ○ Use a sample of risk assessments, such as a qualitative What-If, HAZOP, Quantitative Risk Assessment (QRA) or FMECA.

Copyright © Glencore 2022

	○ Identify the scenarios which could result in a Major Incident. ○ Select the safeguards against major accidents. ○ Validate the list of safeguards generated by the risk assessment against API 14C, ISO10418:93, AS4024, AS62061 or similar for process systems to generate tables of SCS. ▪ Apply table(s) across all similar process components across all process areas.
1.5 Task Analysis and Templates Established	In order to reduce risk exposure due to inconsistent execution of maintenance and operations tasks. Operation and maintenance task analysis and work instruction standard templates are to be developed and implemented, together with JSEA as required, when standard job (task list) has not been developed. This will provide a consistent means by which activity is conducted by reducing variability. A work instruction template should have been established as an output for implementing E05 Equipment Operating and Maintenance Strategy Manual and Maintenance Tactics Development Standard.
1.6 Induction Programs Established	Induction programs that are already implemented shall cover off on the fundamental requirements of risk management including: • Glencore Risk Management Framework • Risk identification • Risk analysis • Risk evaluation • Risk treatment • Risk Monitor and Review. Other induction programs identified shall also cover these fundamentals.
1.7 Handover and Commissioning Used	Refer to Element E06 Commissioning and Handover Management.
1.8 Permit System Established	Permitting systems are to be established for hazardous activities to be performed in compliance with expectations from Glencore's Work Permit Guideline.
2.0 Asset Compliance Requirements	**Allocate roles and responsibilities to review relevant publications to identify any potential asset management compliance requirements.**
2.1 Roles and Responsibilities Allocated	Roles and responsibilities are to be allocated to enable identification and management of Asset Management compliance requirements.
2.2 Glencore Copper Standards Utilised	Refer to Glencore Copper HSEC standards to identify any potential asset management compliance requirements.
2.3 Legislated Acts/Regulations Utilised	All legislated acts and regulations shall be identified and management through the Asset Management Framework, manuals, guidelines and standards.
2.4 Industry/Site Standards Utilised	Industry and site standards shall be consulted to identify any asset management compliance requirements.
2.5 Incident Reports Utilised	Incident reports, particularly High Potential Risk Incidents (HPRI), shall be reviewed to determine if any asset management compliance issues have been identified and actions put in place to manage such issues.
3.0 Asset Documentation Management	**Developing and implementing documentation (standards, procedures, guidelines and work instructions) to confirm assets are managed in line with mandated and assessed requirements. (Refer to Element E12 Asset Information Management)**
3.1 Assets Managed Using Standards	Ensure all relevant documentation has been identified so assets can be managed to engineering and legislated standards and practises.

Copyright © Glencore 2022

3.2 Legislated and Engineering Standards Used	Items identified in process step 3.1 shall be used for the purpose of managing assets and ensuring legislative requirements are met.
3.3 Site Standards Exceed Legislated Needs	Where applicable, site engineering standards and practises should reach beyond the requirements of legislated standards and practises.
3.4 Equipment Operating Guidelines Used	Original Equipment Manufacturer (OEM) and site-specific equipment operating guidelines/procedures are to be available as necessary for key stakeholders
3.5 Maintenance Guidelines Used	OEM, industry specific and site-specific learnings built into Work Instructions (Safe Work Procedures, Task Lists, etc.) to guide the safe and quality execution of Maintenance to reduce the likelihood of incident and premature failures.
3.6 Strategies Meet Compliance Needs	Refer to E05 Equipment Operating and Maintenance Strategy Manual and Maintenance Tactics Development Standard. These documents lay out the processes by which maintenance strategy and tactics are developed and deployed. Part of the focus of this process is to ensure that all compliance requirements are identified and mitigating actions (tactics) developed to eliminate or significantly reduce the likelihood or consequences of events of a legislated or compliance nature.
3.7 Procurement Achieves Compliance	Procurement and Supply Chain documentation such as Material Identification and Purchasing Information Records are accurate and up to date to reduce the risk of inappropriate parts being used, leading to premature failures or delays in the supply extending downtime and Financial Impact. Refer to E13 Procurement and Supply Chain Management.
3.8 Risk Assessments for Whole Lifecycle	Risk assessments for critical assets are to be conducted and should consider whole of life, these could be in the form of: • RCM/FMEA • Criticality analysis • Asset Budget Attainability • HAZOP • Life Cycle Cost analysis • Bow Tie • 5 Why • RCA
4.0 Risk Awareness, Skills and Capability	**Determining the awareness, skills and capability levels required to assess risk, mitigate that risk and manage compliance across all assets and lifecycles.**
4.1 Awareness, Skills and Capability Identified	Skills, capabilities and awareness shall be determined so that each Asset Management role is able to assess risk, manage that risk and manage compliance across entire asset base through the asset full lifecycle.
4.2 Level of Understanding Fully Mapped	A minimum level of risk management and compliance requirements should be defined and mapped to each Asset Management role.
4.3 Minimum Competencies Identified	Refer to Element E02 Personnel Management which provides an overview regarding, Human Resources (HR) Planning, Personnel Selection, Personnel Development, Progress Reviews and Individual Recognition and E01 Asset Management Leadership. Competency requirements to conduct asset management activities are to be identified, established and managed. This should feed into the training/competency process within Glencore Copper.
4.4 Recertification of Competency Adopted	Competencies for high-risk tasks are to be assessed on a regular basis and any certification and recertification requirements identified and managed.
5.0 Asset Risk Management Effectiveness	**Measuring the effectiveness of asset risk management systems regularly and actioning plans to achieve compliance targets.**

Copyright © Glencore 2022

5.1 Risk Management Regularly Measured	Risk Management System reviews should consider the following: • Risk Identification – are risks being identified from a range of sources that reflect the asset management activities? • Risk Management Plans and Actions – are plans being implemented, actions tracked and completed? Are the actions having the desired impacts? • Close out of Risks – are risks being removed for the risk register when they are being managed at an appropriate level? • Residual Risk – are risks being managed to acceptable levels and the residual risk understood? • Performance Management, Risk Control and Risk Profile – are risk reports being produced which are dynamic and reflect change in risk profile?
5.2 Audits Measure Compliance	Audits are to be conducted to ensure that Glencore Copper Corporate Risk Management Framework has been applied appropriately to asset management and that all associated documentation is compliant to that framework. Where deficiencies are discovered action plans are to be developed and actions implemented to remove or significantly reduce the risk to As Low as Reasonably Practicable (ALARP) and to ensure compliance is achieved.
5.3 Incidents and Observations Reviewed	Regular reviews of incidents and observations to establish the effectiveness of asset risk management and asset risk management systems.
5.4 Capability Used to Manage Compliance	Refer to Element E02 Personnel Management and establish training plans to include developing the capability to enable compliance to be managed. A gap analysis to be conducted to provide an understanding of the training requirements needed.

Copyright © Glencore 2022

4.3 Process RACI Description

The RACI matrix below in Table 4-2 addresses the high-level functional elements of the Risk Management and Compliance process. For the overall Asset Management RACI matrix, refer to the Asset Management Intranet page.

Note: The Commercial Department does not appear in this high-level RACI, although their involvement will be required from time to time dependent on the nature of the variance.

The codes used in the RACI analysis are defined as follows:

TABLE 4-2 PROCESS RACI

R	Responsible	The "doer" – the individual(s) who will perform an activity or directs others to perform the activity.
A	Accountable	"The buck stops here" – the individual who ultimately "owns" the activity – there should only be one person.
C	Consulted	Person that needs to feedback and contribute to the activity.
I	Inform	The individual(s) who needs to be informed after a decision or action is taken if relevant. (via 1-way communication).

TABLE 4-3 FUNCTIONAL DESCRIPTIONS

Function	Description
General Management	• Ensures risk management is well understood across site. • Ensures that acts, regulations and standards are complied with for the management of assets. • Ensures that maintenance strategies provide compliance to acts, regulations and standards. • Informed of risk management audits and reviewing incidences and observations.
Maintenance Management	• Responsible with respect to risk management being well understood. • Ensures FMECA and HAZOPs are established, asset integrity is assessed, management of change is applied, safety critical systems are identified, task analysis templates created, and handover and commissioning are used. • Responsible with respect to risk management being well understood, induction programs and permit systems established. • Ensures that roles and responsibilities are allocated, Glencore Copper standards are utilised for risk management and that incident reports are utilised. • Ensures that assets are managed using standards, equipment and maintenance guidelines used and that risk assessment are considered for the asset whole of life.

Copyright © Glencore 2022

	• Responsible with respect to legislated and engineering standards used, site standards exceed legislated standards. • Ensures risk awareness, skill and capability are managed. • Ensures risk management effectiveness.
Maintenance Execution	• Responsible with respect to risk management being well understood. • Responsible with respect to handover and commissioning is used for risk related projects. • Provides input with regards to FMECA and HAZOP establishment, asset integrity assessments, management of change, identification of safety critical systems, task analysis templates and permit system established. • Responsible with respect to asset compliance requirements. • Responsible with respect to managing assets using standards, equipment and maintenance guidelines used and risk assessments for whole of life of assets. • Provides input with regards to site standards exceeding legislated standards and the procurement achieves compliance. • Provides input with regards to risk awareness, skills and capability identification and recertification of competency. • Responsible with respect to the regular measure of risk management effectiveness. • Provides input with regards to risk management audits, reviewing incidents and observations and managing capabilities.
Maintenance Planning	• Responsible with respect to risk management being well understood. • Responsible with respect to handover and commissioning is used for risk related projects. • Provides input with regards to FMECA and HAZOP establishment, management of change, task analysis templates. • Responsible with respect to asset compliance requirements, except providing input with respect to roles and responsibilities allocated. • Provides input with regards to assets risk documentation management. • Provides input with regards to risk awareness skills and capability identification and recertification of competencies. • Responsible with respect to the regular measurement of risk management effectiveness. • Provides input with regards to risk management audits, review of incident and occurrences and capabilities managed.
Operations Management	• Accountable for permit system establishment and application. • Responsible with respect to risk management being well understood. • Responsible with respect to task analysis templates and induction programs establishment and handover and commissioning used. • Responsible with respect to asset compliance requirements. • Responsible with respect to assets documentation management, except procurement achieving compliance. • Responsible with respect to the management of risk awareness, skills and capability. • Responsible with respect to asset risks management effectively.
Reliability	• Ensures a permit system is established. • Responsible with respect to risk management being well understood. • Responsible with respect to task analysis templates and induction programs establishment and handover and commissioning used. • Responsible with respect to asset compliance requirements. • Responsible with respect to assets documentation management, except procurement achieving compliance. • Responsible with respect to the management of risk awareness, skills and capability. • Responsible with respect to asset risks management effectively.
Supply/Warehouse	• Responsible with respect to risk management being well understood. • Responsible with respect to change management is applied.

Copyright © Glencore 2022

	• Provides input with regards to FMECA and HAZOP establishment, task analysis template and induction programs established and that handover and commissioning is used. • Responsible with respect to asset compliance requirements. • Ensures that procurement achieves compliance. • Responsible with respect to assets are management using standards and that site standards exceed legislated standards. • Provides input with regards to equipment and maintenance guidelines used, maintenance strategies meet compliance needs and risk are assessed for whole of life. • Responsible with respect to identifying risk awareness, skills and capability and recertification of competencies. • Provides input with regards to mapping level of risk management understanding and identifying minimum competencies. • Responsible with respect to asset risks management effectively.
Technical Services	• Responsible with respect to all aspects of management of asset risk, except FMECA and HAZOP establishment. • Responsible with respect to asset compliance requirements. • Responsible for all aspect of managing asset documentation, except for procurement achieving compliance. • Responsible with respect to identifying risk awareness, skills and capability. • Responsible with respect to asset risks management effectively. • Ensures a permit system is established. • Responsible with respect to risk management being well understood. • Responsible with respect to task analysis templates and induction programs establishment and handover and commissioning used. • Responsible with respect to asset compliance requirements.
HSEC	• Ensures that induction programs are established. • Responsible with respect to risk management is well understood. • Responsible with respect to the application of management of change. • Responsible with respect to using handover and commissioning of risk related projects. • Responsible with respect to the establishment of a permitting system. • Provides input regarding assessment of asset integrity. • Provides input regarding FMECA and HAZOP. • Provides input regards the identification of safety critical systems. • Provides input regarding task analysis template establishment. • Responsible for all aspects of asset compliance requirements, except provides input with respect to the allocation of roles and responsibilities. • Responsible with respect to the use of engineering and legislated standards. • Responsible with respect to site standards exceeding legislated standards. • Responsible with respect to maintenance strategies meet compliance needs. • Responsible with respect to risks assessed for asset whole of life. • Responsible with respect to identifying risk awareness, skills and capability and recertification of competencies. • Provides input with regards to mapping level of risk management understanding and identifying minimum competencies. • Responsible with respect to asset risks management effectively.

Copyright © Glencore 2022

5. Deployment

The deployment of the Risk Management and Compliance approach across all business areas is through:

- Awareness presentation
- Position description alignment
- Competency assessment
- Training, coaching and mentoring.

5.1 Awareness Presentation

This Manual is supported by a slide presentation and video to help facilitate communication and to raise awareness on how it contributes to the Asset Management Framework and business success.

5.2 Position Description Alignment

To effectively deploy this Manual, the essential process steps and activities need to be diligently mapped and assigned to approved positions within Glencore Copper.

The RACI matrix assists in the visualisation that everyone is working towards the same goal. It clarifies, not only the individual's responsibilities, but also that of others. It has proven to be an effective tool to quickly understand and close the gaps between current and desired practices and business process activities.

Position descriptions including KPIs need to be aligned to the RACI matrix and measures of success. This is the basis for ongoing performance reviews and the creation and execution of individual development plans.

5.3 Competency Assessment

This Manual is supported by an Asset Management competencies assessment tool which is used to:

- Guide recruitment, selection, development, and deployment of people in asset management roles across the company
- Provide employees responsible for managing assets with feedback, development, coaching and recognition for their performance.
- Map, build and manage the asset management talent pool across the company.
- Identify strengths and development needs in asset management practitioners.

5.4 Training, Coaching and Mentoring

Coaching and mentoring are another way to assist employees improve their understanding of their role and to improve performance.

Coaching is generally about improving performance in the short term where mentoring is about achieving high performance and career aspirations over a longer term.

Coaching or mentoring requires addressing that a person is not currently up to the required level to perform their role as effectively and efficiently as they could. The build-up of skills to perform efficiently and effectively requires a large investment of time and cooperation.

Coaches and Mentors need to be carefully selected and must be committed for the long term to effect maximum success.

Copyright © Glencore 2022

6. Measures of Success

Refer to Glencore Copper's AM Manual E16 Reporting and Performance Management Manual for current KPI's

Metric	**Outstanding Critical Control, Statutory and Legal Work (REPLPM001)**
Definition	The objective of this report is to display all outstanding Critical Control, Statutory and Legal work with a past due date.
Performance Indicator	Zero (0) Outstanding Work
Calculation Criteria	1. All Work Orders with a Maintenance Activity Type of **340**, **580**, **630** or **640** with a Work Order "Basic Finish Date" date before the current date that have not achieved TECO or CLSD status 2. Criteria a. Created On: -3650 < Current Date < -2 b. User Status Excluded: CANC c. System Status Excluded: CLSD, TECO d. MAT inclusive: 340, 580, 630, 640
Rationale	This is important as it identifies all the outstanding work related to compliance activities that can have a material risk on the business. Outstanding Critical Control, Statutory and Legal Work that has been completed to MCMP shows the **risks** are being managed but not necessarily the **compliance**. i.e. the work order may be awaiting a third-party report to be received to achieve the TECO status.

Maintenance Activity Type (Code & Description)	
340	Statutory / Legislation
580	Work Standard ISO
630	Critical Control
0	Critical Control / Statutory / Legal

Copyright © Glencore 2022

7. Improvement

The process to review and continually improve the approach and deployment for Risk Management and Compliance is scheduled Annually, or when there is a sudden change in the Operating Context. As the organization matures a longer review period could be considered.

8. References
