GLENCORE

Continuous Improvement Management

17

Continuous Improvement Management

Operational Excellence, Glencore Copper
06 June 2022, Version 1.0

To close out the drafting of the manual a workshop was held with the following stakeholders in May 2022:

- Osvaldo Zamorano (Glencore Copper Asset Management – Metallurgical Assets)
- Nicolas Fortin (Horne-CCR)
- Yan Letourneau (Horne-CCR)
- Ikechukwu Iheanacho (CSA)
- Maximo Rojas (PASAR – *remote revision)*
- Nicholas Taylor (Glencore Copper commercial team - *remote revision)*
- Neale Laffin (Queensland Metals – Glencore Zinc)
- Robert Farrell (Murrin Murrin Operations – Glencore Nickel)
- Probin Konwar (Murrin Murrin Operations – Glencore Nickel)
- Sagar Karde (Murrin Murrin Operations – Glencore Nickel)
- Rohan Reisener (Glencore Copper Asset Management - Australia)
- Dino Moll (Glencore Copper Asset Management - Australia)
- Anthony Green (Glencore Copper Asset Management - APAC)
- Akeem Araoye - (Glencore Copper Asset Management – North America)
- Yuri Yurac - (Glencore Copper Asset Management – South America)
- Lawrence Hlatshwayo - (Glencore Copper Asset Management – Africa)

Supported by the AM Network Pty Ltd and Work Management Solutions Pty Ltd

Preface

The Asset Management Framework, Policy and Manuals are intended to provide leading Asset Management practices when applied and will be continually improved for the benefit of Glencore Copper.

The real value of sharing the knowledge gained from the use of these documents will come from continued discussion of the issues and rationale behind each document rather than by reading and interpreting them as individuals.

Readers are encouraged to consider these against our values around Safety, Responsibility, Simplicity, Integrity, Openness and Entrepreneurialism and how they reflect our Purpose – to responsibly source the commodities that advance everyday life. This document lays out the minimum standard for Glencore Copper and compliance to this manual will demonstrate a maturity value equal to Planned/Deployed (3) on the Glencore Copper Asset Management Maturity Scale.

1. Introduction

The Asset Management Policy and Manuals define how Glencore Copper manages the whole of life of an asset to ensure optimal value is extracted by ensuring assets are capable of meeting business and stakeholder objectives.

Figure 1-1 describes the high-level Asset Management Framework, which enables Glencore Copper to deliver its Asset Management purpose and vision.

FIGURE 1-1 ASSET MANAGEMENT FRAMEWORK

2. Objectives

The objective of this manual for Continuous Improvement (CI) Management is to ensure:

- A culture of Continuous Improvement is embedded within the organisation.
- Budgets, resources and competency required to deliver Continuous Improvement and subsequent Asset Management Objectives are understood and forecasted.
- Benefits and delivery time scale of Continuous Improvement projects are forecasted.
- Feedback on the demonstrated value of CI projects is provided and communicated to stakeholders.
- Establish “Best Practice” register for Improvement initiatives to enable sharing throughout the Glencore business.

2.1 Accountabilities

Dedicated resources must be assigned and capabilities developed within each Operation to deliver Continuous Improvement Management processes that enable effective delivery of the Asset Management objectives.

Assign single point accountability for each or all of the following:

Copyright © Glencore 2022

- Identifying improvement opportunities
- Selecting opportunities
- Analysing selected opportunities
- Managing and resourcing continuous improvement projects
- Carrying out post project reviews
- Carrying out annual improvement reviews.

2.2 Scope

This manual is to be read in conjunction with all other manuals and guidelines in the Asset Management Framework and the Glencore Copper Capital Management Framework. The scope includes:

- The constant flow of improvement requests asset managers receive from both internal and external sources, are prioritised and managed, ensuring only achievable commitments to beneficial changes.
- Process performance is monitored, regular formal reviews and reporting is undertaken by each organisational level and function to enable the most important opportunities to be identified.
- Process to select and analyse the selected initiatives to focus effort and appropriate diligence
- Each organisational level and function are involved in continuous improvement for effectiveness, efficiency and sustainability.
- The understanding that most improvement initiatives fail in the implementation phase, so a systematic implementation approach forms part of the system.
- A systematic approach is taken to improvement which allows long-term planning to estimate and justify the resources level necessary to obtain asset management goals.
- That continuous improvement is recognised as a core activity referenced in ISO 55000 and other asset management references.

3. Definitions

5 Why's - an iterative interrogative technique used to explore the cause-and-effect relationships underlying a particular problem. The primary goal of the technique is to determine the root cause of a defect or problem by repeating the question "Why?". Each answer forms the basis of the next question. The "five" in the name derives from an anecdotal observation on the number of iterations needed to resolve the problem.

Continuous Improvement (CI) – is an ongoing, long-term approach to improving processes, products and services.

FMEA – Failure Mode and Effect Analysis is a structured approach to discovering potential failures that may exist within a product, asset, or process. Failure modes are the ways in which a process can fail. Effects are the ways that these failures can lead to waste, defects, or harm. Failure Mode and Effects Analysis is designed to identify, prioritize and limit these failure modes.

Key Stakeholders - are typically the members of a project team, project managers, executives, project sponsors, customers and users. Stakeholders are people who will be affected by your project at any point in its life cycle and their input can directly impact the outcome.

Kaizen - means continuing improvement involving everyone – managers and workers alike.

Lean Six Sigma - a method that provides organisations tools to improve the capability of their business processes. This increase in performance and decrease in process variation helps lead to defect reduction and improvement in profits, employee morale and quality of products or services.

Pareto Analysis - based on the idea that 80% of a project's benefit can be achieved by doing 20% of the work—or, conversely, 80% of problems are traced to 20% of the causes.

Copyright © Glencore 2022

Project Control – the tools, process, skills and experience, when integrated provide the right information at the right time to enable the right decisions to be made.

Project Scope - part of project planning that involves determining and documenting a list of specific project goals, deliverables, tasks, costs and deadlines.

Root Cause Analysis (RCA) - the process of discovering the root causes of problems in order to identify appropriate solutions. RCA assumes that it is much more effective to systematically prevent and solve for underlying issues rather than just treating ad hoc symptoms and putting out fires.

SWOT – Strengths, Weakness, Opportunity and Threat, a method for identifying and analysing internal strengths and weaknesses and external opportunities and threats that shape current and future operations and help develop strategic goals.

Theory of Constraints - a methodology for identifying the most important limiting factor (i.e., constraint) that stands in the way of achieving a goal and then systematically improving that constraint until it is no longer the limiting factor. Often referred to as a bottleneck.

4. Approach

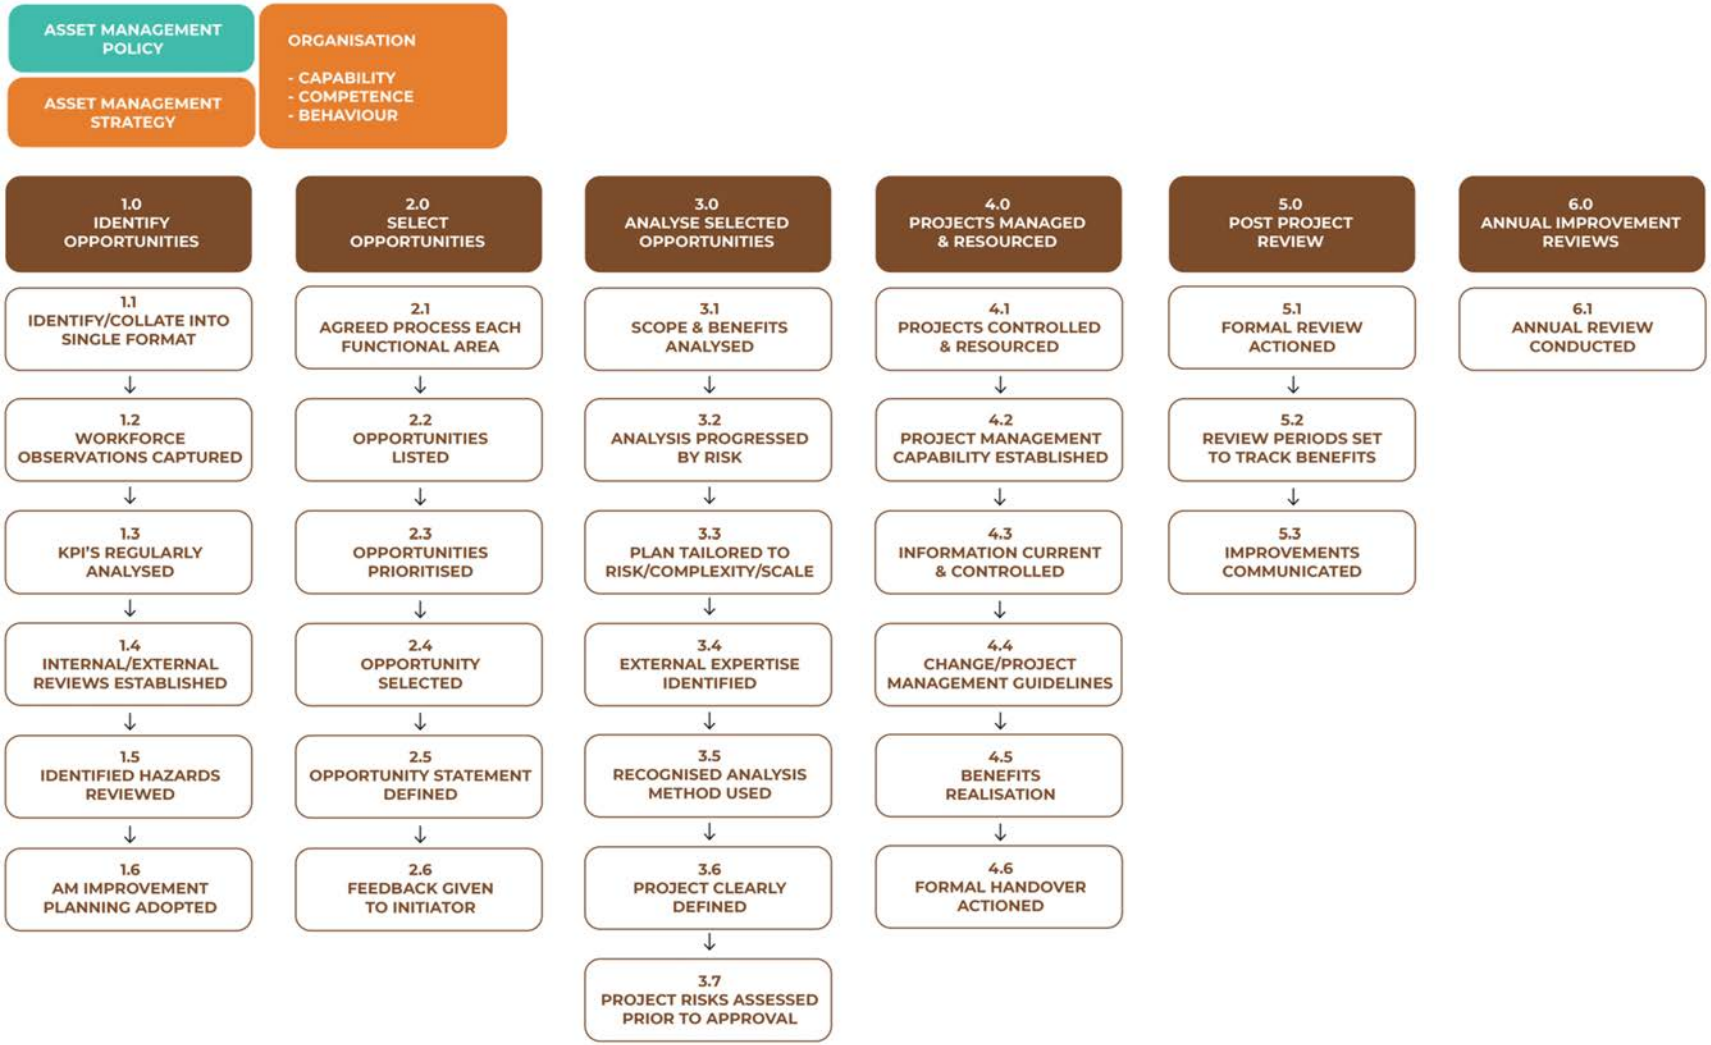

The approach for Continuous Improvement Management is described through:

- Process Flow - pictorially illustrates the key Continuous Improvement Management activities, refer to Figure 4-1.
- Process Description – defines in more detail the key Continuous Improvement Management activities, refer to Section 4.2.
- Process RACI Matrix – indicates for each activity, the Functions who are responsible, Accountable, who are Consulted prior to final decision/action and those who are Informed of any outcomes and actions, refer to Section 4.3.

4.2 Process Description

TABLE 4-1 CONTINUOUS IMPROVEMENT MANAGEMENT PROCESS DESCRIPTION

PROCESS STEP	DESCRIPTION
1.0 Identify Opportunities	**Identifying and collating all improvement opportunities into a consolidated format for consideration.**
1.1 Identify/Collate into Single Format	Improvement opportunities are to be identified through the analysis of the following Asset Management Framework requirements: • The Glencore Copper Asset Management Strategic direction • Asset Management Maturity Self-Assessment • Asset Planning performance • Asset Delivery performance • Asset Operate and Maintain performance • Asset Disposal performance • Asset Management Support and Control Performance. All improvement opportunities identified shall be collated and a single format used so that each opportunity can be consistently considered for inclusion into the improvement program.
1.2 Workforce Observations Captured	Another means by which improvement opportunities can be identified is by the development of a process by which workforce improvement observations and suggestions can be captured. Consideration of reviewing work order feedback, encouraging ideas from toolbox meetings and other forums, should be given.
1.3 KPI's Regularly Analysed	Refer to Element E16 Reporting and Performance Management for all Glencore Copper. Corporate KPI's should be analysed on a regular and ongoing basis Local site KPI's should also be analysed regularly. Important to note the KPIs need to drive the desired behaviours, therefore this should be a consideration during routine review, not just the physicals. Items identified as not complying shall be progressed into the improvement selection phase at process step 2.0.
1.4 Internal/External Reviews Established	Formal internal and external reviews shall be established to identify improvement opportunities, such as Full Potential Analysis and benchmarking. Refer to E18 Asset Management Monitoring, Audit and Assurance manual and the Asset Management Improvement (AMIP) Plan guideline.
1.5 Identified Hazards Reviewed	Hazard assessments and hazards identified shall be reviewed to identify any improvement opportunities. The opportunities identified shall be documented and progressed into the improvement selection phase at process step 2.0. Refer to the Asset Budget Attainability guideline.
1.6 AM Improvement Planning Adopted	Refer to Element E03 Asset Management Planning. The Asset Management Planning process provides a means by which asset management improvement opportunities are identified and managed. The implementation of this manual shall adhere to the requirements of the AMIP process.
2.0 Select Opportunities	**Utilising for each function a process for registering, prioritising and selecting opportunities to progress.**

Copyright © Glencore 2022

2.1 Agreed Process Each Functional Area	Each functional area shall develop and agree on a process for selecting opportunities to be progressed. This should include a scoring model to be developed and scores assigned to each opportunity. A typical scoring model is provided below: • Define the Scoring Criteria - The scoring model should be both qualitative and quantitative and as a minimum should include: ○ Strategic Criteria – how does the opportunity align to and enable delivery on Glencore Copper Strategic Objectives. ○ Financial Criteria – what is the financial benefit of the opportunity. Refer to Glencore Copper financial requirements for project return and Element E15 Asset Cost Control. ○ Risk Criteria – the measure of the overall risk of the project. Refer to Element E14 Risk Management and Compliance. ○ Ease of Implementation - how easy is the project to implement
2.2 Opportunities Listed	Improvement opportunities shall be listed using the various sources of information as detailed in this manual and project prioritisation set.
2.3 Opportunities Prioritised	A common process shall be developed for the opportunity prioritisation phase. A typical process is provided below: • Define the scoring criteria – refer to process step 2.1. • Scoring ranges are to be assigned to the criteria (e.g. 1-5 or 1-25) • Assign scoring weights to each criteria (e.g. risk may be more important than cost) • Test the scoring model to see if it provides meaningful results. • Implement the process. Conduct prioritisation on each identified opportunity. A typical prioritisation matrix is shown below: 
2.4 Opportunities Selected	Opportunities are to be selected to progress based on the priority ranking developed in process step 2.3 by the Area Management Team.
2.5 Opportunity Statement Defined	Each opportunity is to be allocated an initial owner. The opportunity owner is to identify the opportunity sponsor, from which funding may be sourced. Key stakeholders are to be identified and the opportunity owner is to champion the opportunity with the key stakeholders. The opportunity owner shall develop a short statement describing the nature of the opportunity, the size of the opportunity (benefit) and the impact of the opportunity. The opportunity statement is to be presented to the key stakeholders and modified based on feedback. Each opportunity identified is to be assessed using the same criteria and allocated to progress as required.
2.6 Feedback Given to Initiator	The initiator of the idea/opportunity is to be provided feedback regardless of whether the idea/opportunity has been selected to progress. Feedback should include information

Copyright © Glencore 2022

	regarding the selection process used and why the idea/opportunity was included or excluded from progressing.
3.0 Analyse Selected Opportunities	**Analysing selected opportunities to determine the scope of solutions and obtainable benefits and planning in appropriate detail to allow implementation.**
3.1 Scope and Benefits Analysed	From the opportunity statement a scope is to be developed. The scope should: • articulate what the opportunity entails (including current condition and target condition) so that all stakeholders can understand what's involved. • provide a roadmap that owners can use to assign tasks, schedule work and budget appropriately. • helps focus team members on common objectives; and • prevent projects, particularly complex ones, from expanding beyond the established vision. The benefits of the opportunity are to be analysed in greater detail and the opportunity statement modified as required. The scope should be captured in a site database. Opportunities should also be classified as OPEX or CAPEX. If the opportunity has been classified as CAPEX, then the Glencore Copper Capital Management Framework shall be followed. OPEX should go into the line budget process for action.
3.2 Analysis Progresses by Risk	Further analysis of the opportunity is to be conducted and the opportunity is to be progressed to the next progress stage by completion of risk assessment and considering the risk of not progressing the opportunity. Refer to Glencore Corporate Risk Matrix.
3.3 Plan Tailored to Risk/Complexity/Scale	The prioritised opportunity is to be converted into a project and the extent of the project planning and system to be utilised will be dependent on the risk, complexity and the scale of the project as assessed from the opportunity. This is to be done in consultation with the project sponsor. Transformational change and high value initiatives will require higher (site plus regional/corporate) level stakeholder engagement and application of the corporate continuous improvement system.
3.4 External Expertise Identified	A gap analysis is to be conducted to identify if there is a deficiency in internal competency to analyse the problem and determine the solution. External resources are to be identified to provide assistance should a deficiency exist.
3.5 Recognised Analysis Method Used	The project is to be analysed for potential quality solutions and speed of implementation. There are a number of analysis methods that can be used including but not limited to: • 5 Why's • Root Cause Analysis • FMEA • Strengths Weaknesses Opportunities and Threats (SWOT) • Kaizen • Theory of Constraints • Pareto • Lean Six Sigma. Once a methodology has been agreed solutions should be identified and documented. For Defect Elimination projects refer to Defect Elimination guideline.
3.6 Project Clearly Defined	A project charter template is to be used to clearly define the project requirements, which include: • Title – what the project is to deliver. • Opportunity – the opportunity as derived from process step 3.1 of this manual; this represents the current state of the problem. • Desired Outcomes– what are the goals in the implementation of the project, for example: ○ Finish on time ○ Finish at or under budget ○ Meet the project requirements. ○ Ensure stakeholder engagement ○ Ensure customer satisfaction.

Copyright © Glencore 2022

	The project goals should also describe the future state (target condition) post project implementation. • Scope – define the scope and the boundaries of the project, what is in and what is out of scope. • Sponsor and stakeholders – identify and document the project sponsor and key stakeholders. • Implementation steps – define the steps to be taken to implement the project. • Resources and challenges – determine resource requirements, including labour and cost. Determine the challenges and the risks of the project. • A project Work Breakdown Structure (WBS) is to be developed in the form of a Gantt chart.
3.7 Project Risks Assessed Prior to Approval	Before the project is to be submitted for approval a full risk assessment must be conducted and the project plan updated. Once updated the following actions are to be conducted: • Circulate the plan to key stakeholder for plan validation. • Present the plan to the project sponsor and other management representation as required, this should include: ○ Plan objectives and goals ○ Major deliverables and scope ○ Timeline ○ Resources ○ Risks and challenges. • Once feedback has been provided the plan is to be updated accordingly • Seek final plan approval and sign off as per the Delegation of Authority process.
4.0 Projects Managed and Resourced	**Controlling and resourcing all projects in progress to allow implementation in agreed timeframes and handed over in consultation with stakeholders.**
4.1 Projects Controlled and Resourced	The project plan and Gantt are to be consulted, resources identified and the project team established. The Project Manager is accountable for project control which should include: • Planning and Scheduling • Risk Management • Cost management • Scope and change management • Quality control • Communication management • Earned value management • Document control • Supplier performance • Reporting • Information management. Consideration should be given to the Project Execution Plan templates for Major, Intermediate and Minor Projects within the CMF.
4.2 Project Management Capability Established	Project Management involves a variety of skills and capabilities that must be established to ensure Project Management success within Glencore Copper. The following provides some of the skills and capabilities that should be considered and established: • Leadership • Communication • Scheduling • Risk Management • Cost Management • Negotiating • Critical Thinking • Task Management • Quality Management • Change Management. Project Managers should have the necessary skills before being selected into the position.

Copyright © Glencore 2022

4.3 Information Current and Controlled	Refer to Element E12 Asset Information Management. A project information plan shall be developed, below provides items to be considered for inclusion: • Information Requirements - What information must be available and to whom? • Information Collection - How will information be collected? • Information Analysis - How will the information be edited, tested and analysed? • Reporting Information - How will the information be disseminated? • Historical Information - How will historical information be maintained? • Access to Information - How will information be secured from unauthorised access? • Personnel - The roles, responsibilities, qualifications and training of the personnel. • Technology - The technology necessary to support the plan's goals and objectives. • Internal Controls - The internal controls necessary to ensure the plan is working. Ensure that all information developed and collected is current information only and any outdated or non-relevant information is removed.
4.4 Change/Project Management Guidelines	The project is to be implemented and a change plan is to be developed. The change plan is to be driven by the same maturity assessment criteria and the Asset Management Framework: • Vision – provide a clear view of what life will be after the work. • Urgency – makes the work real, right now and drives action. • Leadership – set an example to and encourage people to embrace the work. • Roadmap – provide the strategy for achieving the vision and overall direction. • Structure – ensure the necessary systems, tools and resources to implement the project. • Shared commitment – everyone to have a sense of ownership and drive towards a common goal. • Sustaining momentum – recognise hurdles, continuously energises and encourage teams and celebrate success. Glencore Project Management Guideline and the CMF including Project Execution Plan templates, Project Organisation Guideline, Progress Measurement and Earned Value Management Guideline are to be consulted and followed for end-to-end project delivery. Commissioning activities are to be conducted as required. Refer to Element E06 Commissioning and Handover Management. All project documentation is to be completed and stored in required systems and formats.
4.5 Benefits Realisation	Potential project benefits shall be continually measured and realised throughout the project. Tracking physicals and financial results to identify other potential requirements to fully realise potential benefits. Where potential benefits are not being realised, go to process step 3.1 (Scope and Benefits Analysed).
4.6 Formal Handover Actioned	Formal handover should form part of the project planning phase and a formal handover is to be actioned and Element E06 Commissioning and Handover Management is to be consulted. Operational Readiness requirements are to be considered based on the size and complexity of the project. Refer to the Operational Readiness Guideline.
5.0 Post Project Review	**Reviewing each project after handover to determine success and confirm measures are in place for ongoing performance.**
5.1 Formal Review Actioned	A formal review of the project shall be conducted post project handover and a project review form is to be completed and presented to the project sponsor for approval. Further project reviews are to be conducted and the period for such reviews shall be considered and actioned. Additional opportunities identified during each review should go to process step 2.2 (Opportunities Listed).
5.2 Review Periods Set to Track Benefits	Benefits shall be assessed at the frequency agreed to by each project owner. This will ensure that the greatest possible benefits from the project are obtained.

Copyright © Glencore 2022

5.3 Improvements Communicated	Project success is to be communicated to stakeholders. The format and type of communication is to be established and that the stakeholders can provide feedback on the communication.
6.0 Annual Improvement Reviews	**Conducting for each function an annual review of delivered improvements and remaining opportunities to re-forecast the required improvement capability for next year's budget.**
6.1 Annual Review Conducted	An annual review is to be conducted to determine the delivered benefits of each project from a financial position and any outstanding opportunities are also to be reviewed and cost estimates determined. This should be done in line with Annual Business Planning Cycle. Locked in benefits from completed projects need to be fully considered in the Life of Asset and Budgeting Processes.

Copyright © Glencore 2022

4.3 Process RACI Description

The RACI matrix below in Table 4-2 addresses the high-level functional elements of the Continuous Improvement Management process. For the overall Asset Management RACI matrix, refer to the Asset Management Intranet page.

Note: The HSE and Commercial Departments do not appear in this high-level RACI, although their involvement will be required from time to time dependent on the nature of the variance.

The codes used in the RACI analysis are defined as follows:

TABLE 4-2 PROCESS RACI

R	Responsible	The "doer" – the individual(s) who will perform an activity or directs others to perform the activity.
A	Accountable	"The buck stops here" –the individual who ultimately "owns" the activity – there should only be one person
C	Consulted	Person that needs to feedback and contribute to the activity
I	Inform	The individual(s) who needs to be informed after a decision or action is taken if relevant. (via 1-way communication)

TABLE 4-3 FUNCTIONAL DESCRIPTIONS

Function	Description
General Management	• Aggregate and integrate Asset Management Framework with accountability for its implementation across the site. • Improve organizational culture through effective engagement and motivation of people across the site. • Develop and deliver Life of Asset Plan and Budgets. • Sponsor Site Strategic Asset Management Plan. • Control of maturity evolution across the site. • Ensures that the budgeting process is developed and implemented. • Ensures that roles and responsibilities are assigned for continuous improvement. • Ensures that the Continuous Improvement Management process is embedded, monitored and improved across the area/site. • Provides input with respect to the adoption of AM planning improvement
Maintenance Management	• Ensures that Continuous Improvement Management process is embedded across the site. • Ensures that improvement opportunities are identified, prioritised and escalated. • Ensures that high priority improvement opportunities are translated to projects. • Ensures that improvement projects are planned and executed on time and on budget. • Ensures that improvement projects deliver desired business outcomes. • Ensures that there is sufficient budget allocation for improvement projects.

Copyright © Glencore 2022

	• Ensures that improvement projects are reviewed and actions put in place if desired outcomes are not achieved.
Maintenance Execution	• Responsible for the identification of improvement opportunities. • Responsible for the selection of improvement. opportunities to progress based on priority. • Responsible for the analysis of opportunities to progress to projects. • Responsible for the planning, execution, management and close out of improvement projects. • Responsible for improvement project handover to operations. • Responsible for improvement project review and overall annual improvement review. • Responsible with regards to the realisation of project benefits.
Maintenance Planning	• Responsible for the identification of improvement opportunities. • Provides input into opportunity prioritisation. • Provides input into the selection of opportunities to translate to projects. • Provides input to ensuring that information for improvement projects is current and controlled. • Provides input into how projects are progressed, managed and closeout. • Provides input to the project handover to operations. • Provides input into project reviews. • Provides input with respect to the realisation of project benefits
Operations Management	• Responsible the identification of improvement opportunities. • Responsible for opportunity prioritisation. • Provides input into the selection of opportunities to translate to projects. • Provides input into how projects are progressed, managed and closeout. • Consulted through project handover to operations. • Provides input into project reviews.
Supply/Warehouse	• Provides input for the identification of improvement opportunities. • Provides input into opportunity prioritisation. • Provides input into the selection of opportunities to translate to projects. • Responsible for ensuring that information for improvement projects is current and controlled. • Provides input into how projects are progressed, managed and closeout. • Provides input into project reviews.
Reliability and Technical Services – Mining, Processing, Engineering, Reliability	• Responsible for the identification of improvement opportunities. • Responsible for the selection of improvement. opportunities to progress based on priority. • Responsible for the analysis of opportunities to progress to projects. • Responsible for the planning, execution, management and close out of improvement projects. • Responsible for improvement project handover to operations. • Responsible for improvement project review and overall annual improvement review. • Responsible for improvement opportunity budget estimate for the next budgeting period.

Copyright © Glencore 2022

5. Deployment

The deployment of the Continuous Improvement Management approach across all business areas is through:

- Awareness presentation
- Position description alignment
- Competency assessment
- Training, coaching and mentoring

5.1 Awareness Presentation

This Manual is supported by a slide presentation and video to help facilitate communication and to raise awareness on how it contributes to the Asset Management Framework and business success.

5.2 Position Description Alignment

To effectively deploy this Manual, the essential process steps and activities need to be diligently mapped and assigned to approved positions within Glencore Copper.

The RACI matrix assists in the visualisation that everyone is working towards the same goal. It clarifies, not only the individual's responsibilities, but also that of others. It has proven to be an effective tool to quickly understand and close the gaps between current and desired practices and business process activities.

Position descriptions including KPIs need to be aligned to the RACI matrix and measures of success. This is the basis for ongoing performance reviews and the creation and execution of individual development plans.

5.3 Competency Assessment

This Manual is supported by an Asset Management competencies assessment tool which is used to:

- Guide recruitment, selection, development and deployment of people in asset management roles across the company.
- Provide employees responsible for managing assets with feedback, development, coaching and recognition for their performance.
- Map, build and manage the asset management talent pool across the company.
- Identify strengths and development needs in asset management practitioners.

5.4 Training, Coaching and Mentoring

Coaching and mentoring are another way to assist employees improve their understanding of their role and to improve performance.

Coaching is generally about improving performance in the short term where mentoring is about achieving high performance and career aspirations over a longer term.

Coaching or mentoring requires addressing that a person is not currently up to the required level to perform their role as effectively and efficiently as they could. The build-up of skills to perform efficiently and effectively requires a large investment of time and cooperation.

Coaches and Mentors need to be carefully selected and must be committed for the long term to effect maximum success.

Copyright © Glencore 2022

6. Measures of Success

Refer to Glencore Copper's AM Manual E16 Reporting and Performance Management Manual for current KPI's

TABLE 6-1 MEASURE OF SUCCESS

Metric	Outstanding Improvement Actions
Definition	Number of outstanding improvement actions identified through the analysis of improvement opportunities.
Performance Indicator	Outstanding actions closed by due date
Calculation	N/A
Rationale	Continuous improvement covers a broad range and therefore there are likely many improvement opportunities identified and actions developed to address those opportunities. In order to maximise the benefit of improvement opportunities it is important that actions are addressed in a timely manner, therefore are to be complete by the due date as set in the improvement/project plan.

7. Improvement

The process to review and continually improve the approach and deployment for Continuous Improvement Management is scheduled Annually, or when there is a sudden change in the Operating Context. As the organization matures a longer review period could be considered.

8. References

The following documents provide detailed support material that should be read in conjunction with this Manual to provide a comprehensive understanding of Continuous Improvement Management.
